

A close-up photograph of dark brown, rich soil. The soil has a crumbly texture with visible organic matter, including small twigs and roots. The lighting is natural, highlighting the texture and color of the earth.

“Carbonomics” The Wonderful Economy of the Soil

Farming Background

- No-tilling for 30 years
- 1/2 dryland 1/2 irrigated
- Corn – Beans – Cereal rotation
- Added rye, triticale, oats, barley, vetch, sunflowers, buckwheat

Farming Background

- Cover crops for 12 years
- Green Cover Seed started in 2009

Carbonomic\$ - The Wonderful Economy of the Soil

Carbonomic\$ - The Wonderful Economy of the Soil

7 Keys To A Healthy Economy

- Supply (Producers/Sellers)
- Demand (Consumers/Buyers)
- Currency
- Capital
- Energy and Resources
- Infrastructure
- Defense and Protection

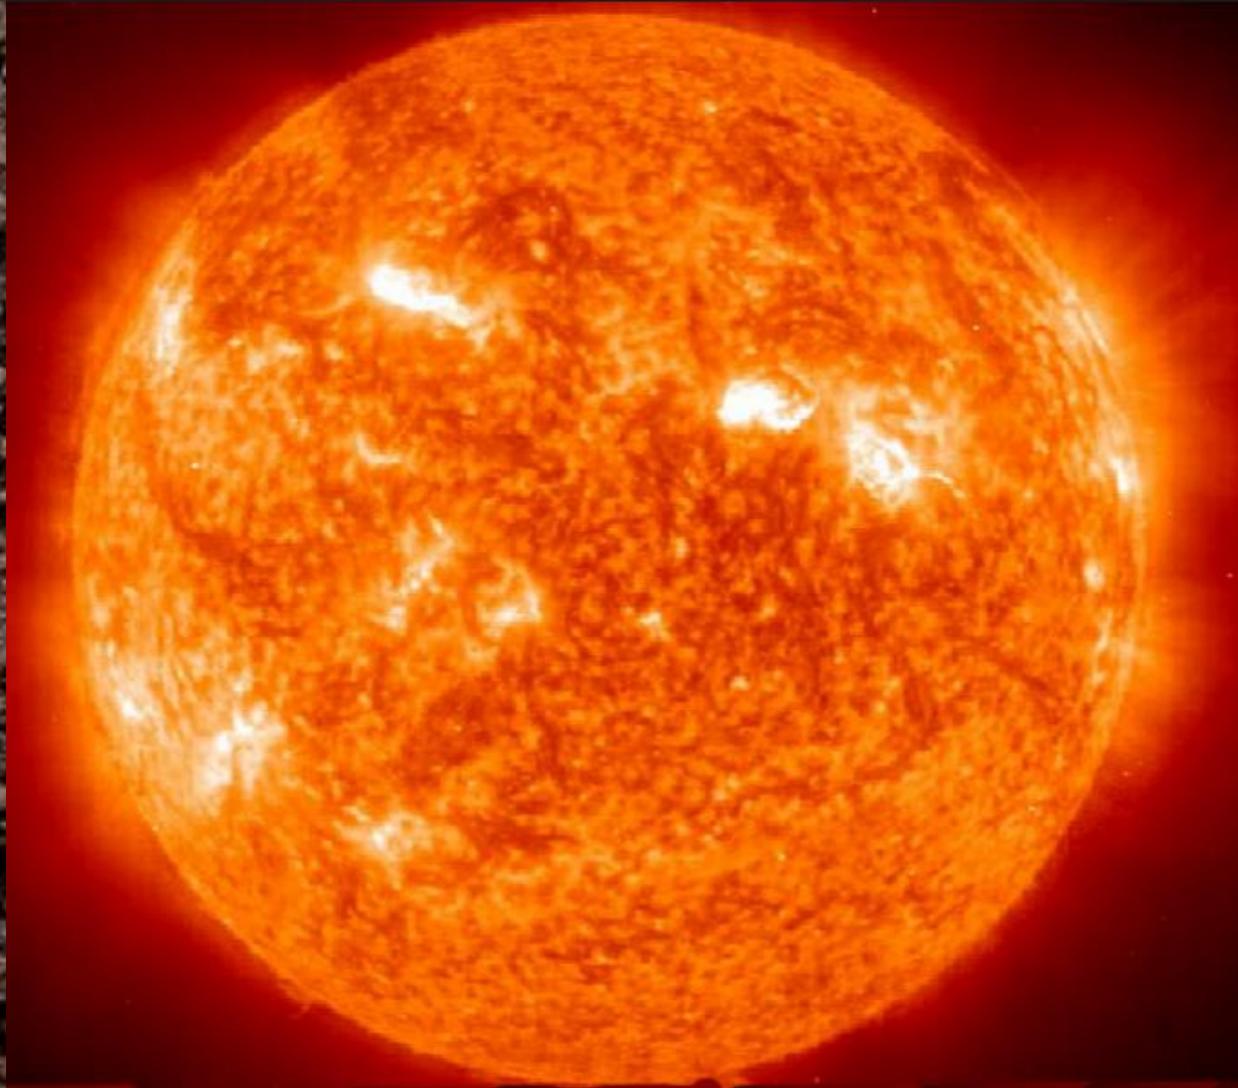

7 Keys To A Healthy SOIL!

- Supply (Producers/Sellers)
- Demand (Consumers/Buyers)
- Currency
- Capital
- Energy and Resources
- Infrastructure
- Defense and Protection

The Soil Economy

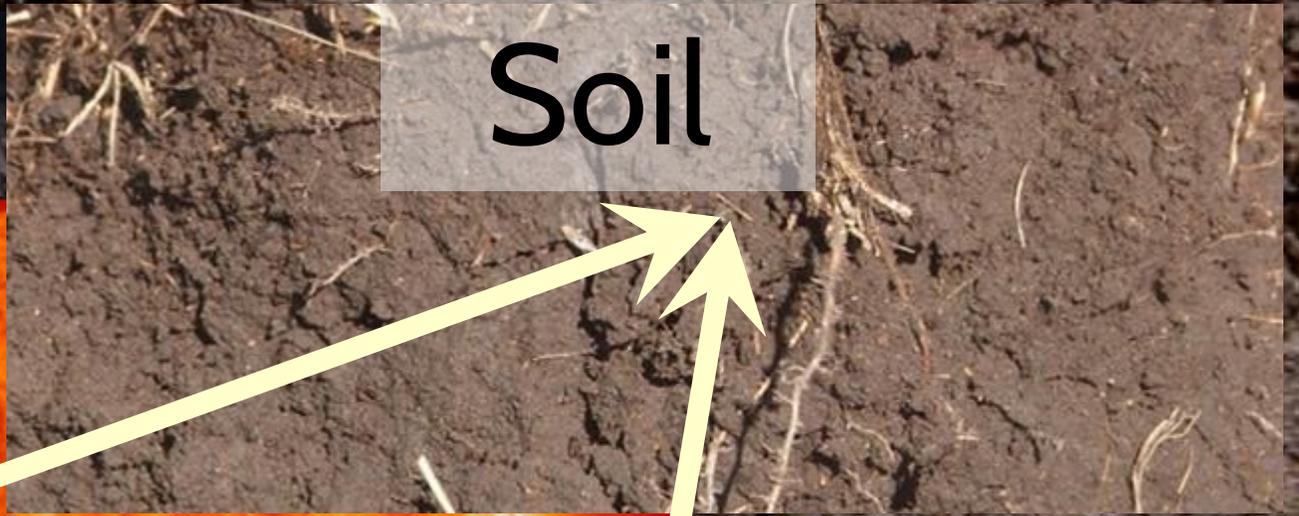

The Soil Economy

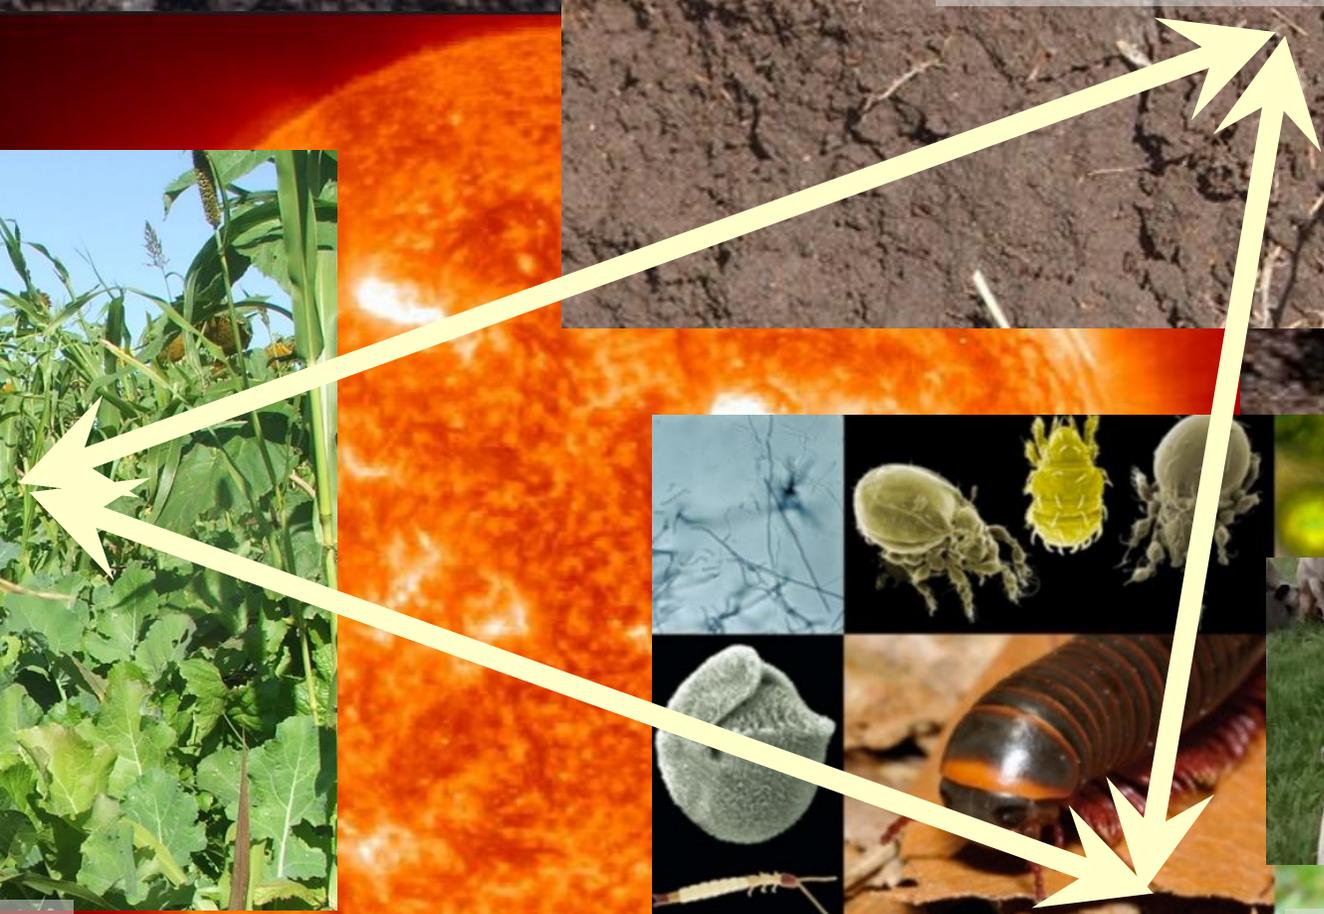

Soil

Plants

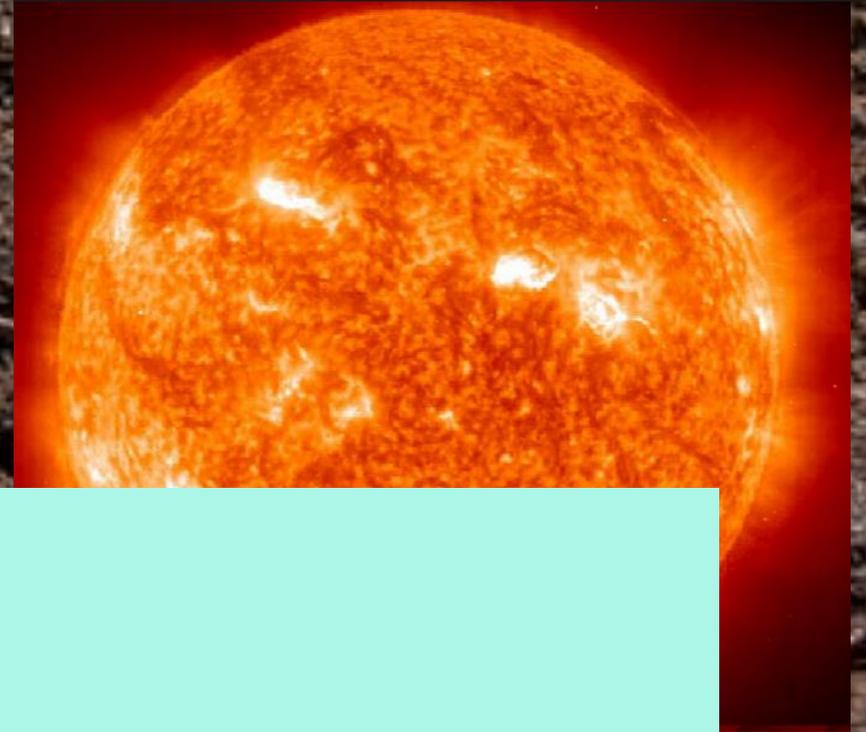

Animals

Supply (Producers/Sellers)

- Plants – Producing Carbon

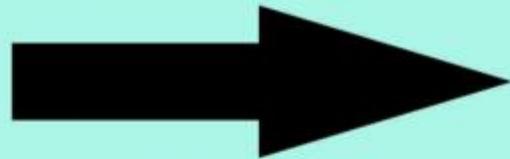

Sun's energy

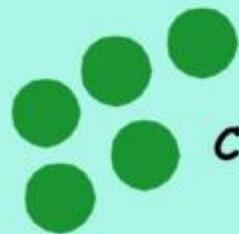

Carbon dioxide

Water

Sugars

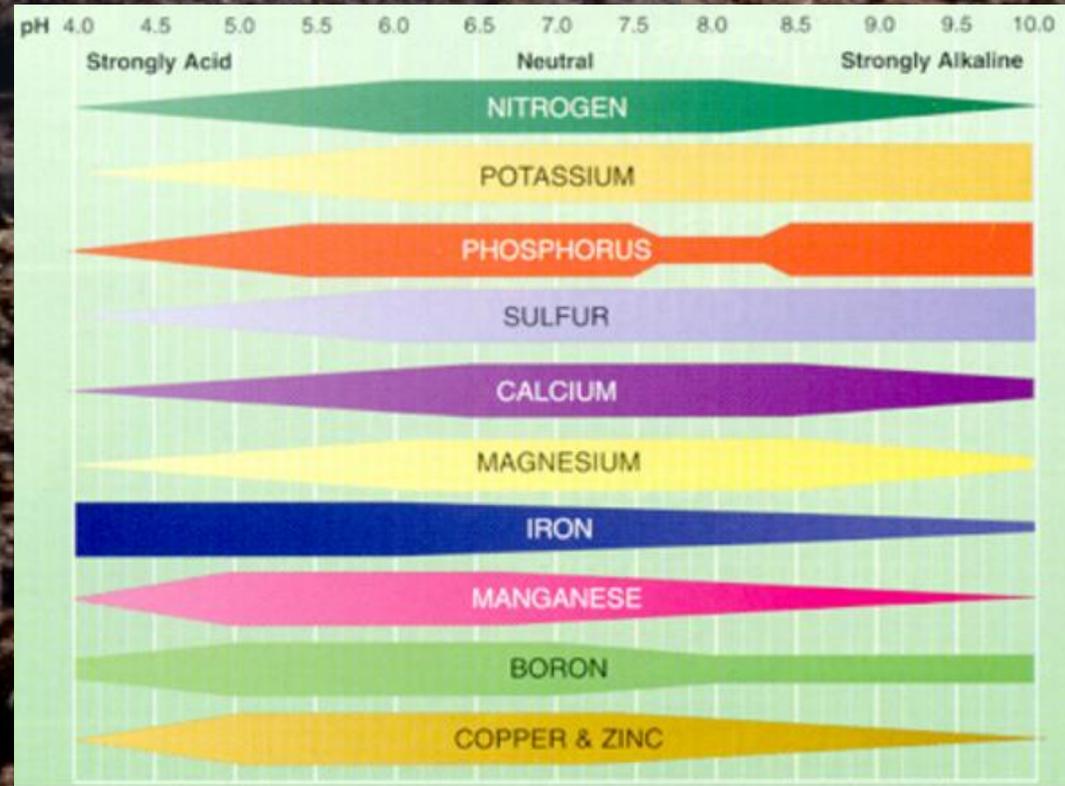

Oxygen

Chlorophyll

Supply (Producers/Sellers)

- Soil – Provides Nutrients (Minerals)
- Soil – Provides Habitat for Roots and Biology
- Soil – Provides Water storage

Supply (Producers/Sellers)

- Soil Biota – Producing Nutrients (Fixation) (Cycling) (Availability)
- Soil Biota – Providing Defense and Protection

Demand (Consumers/Buyers)

- Plants – Need Nutrients and Water
- Plants – Need Services (Protection, Support, etc...)

Demand (Consumers/Buyers)

- Soil- Needs Carbon
- Soil- Needs Services (Protection, etc...)

Demand (Consumers/Buyers)

- Soil Biota- Needs Food and Habitat

Producers –(Sellers) Consumers (Buyers)

- In a strong human economy, one of the leading indicators is low unemployment rate, where most people are both consumers AND producers and are actively engaged in making a contribution to the system.

Producers –(Sellers) Consumers (Buyers)

- The soil economy is strongest when plants, soil, and animals are ALL producing and consuming.
- Diversity is very important.

Agricultural Welfare

- When we externally provide the plant with everything that it needs from the outside, we weaken the economy.
 - Fertility inputs
 - Crop protection inputs

Agricultural Welfare

- When we externally provide the plant with everything that it needs from the outside, we weaken the economy.
 - Fertility inputs
 - Crop protection inputs

We need to allow the system to work the way it was created to work!

Soil

Plants

Soil Biota

Keys To A Healthy **SOIL!**

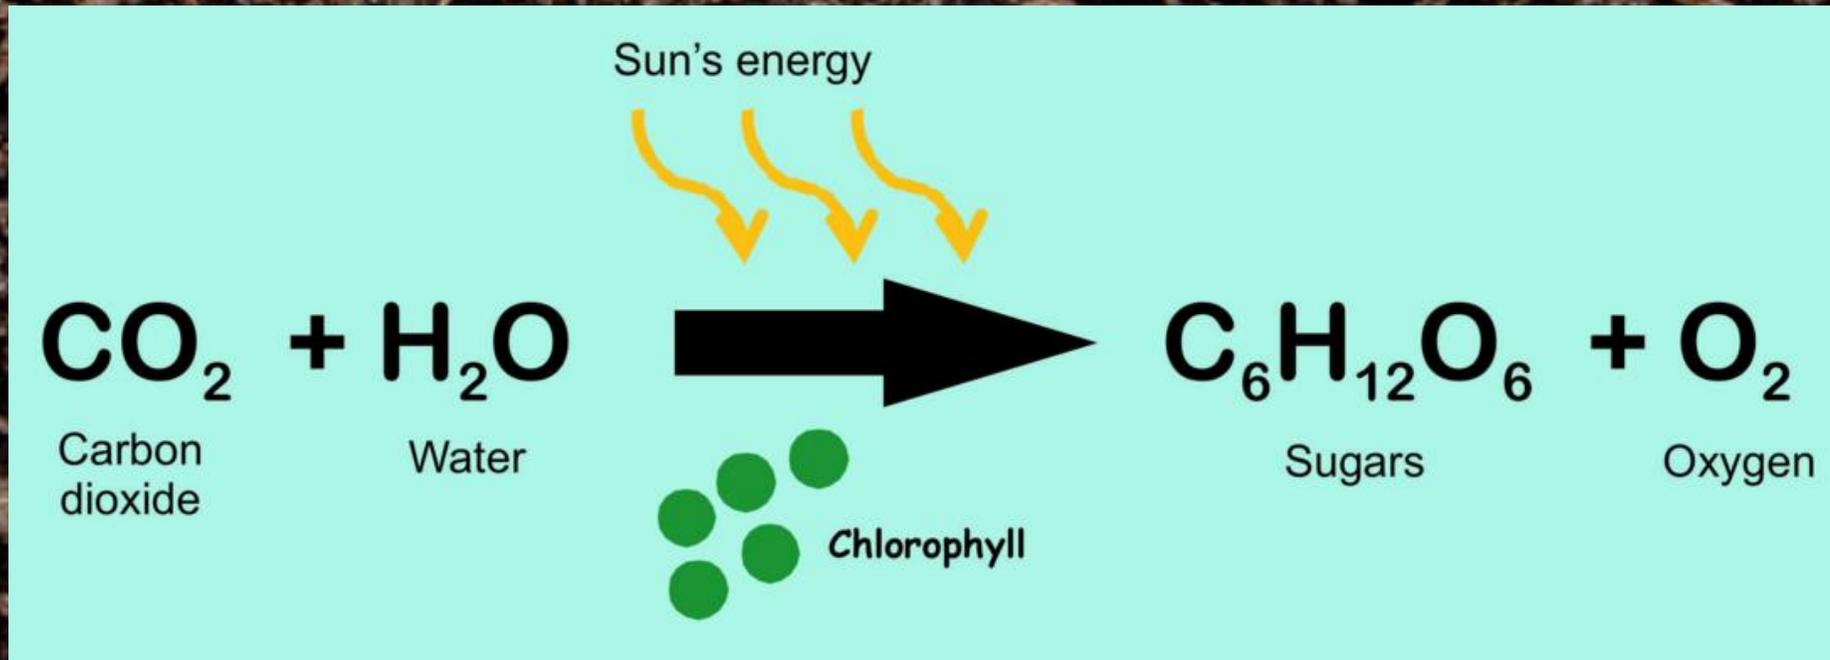

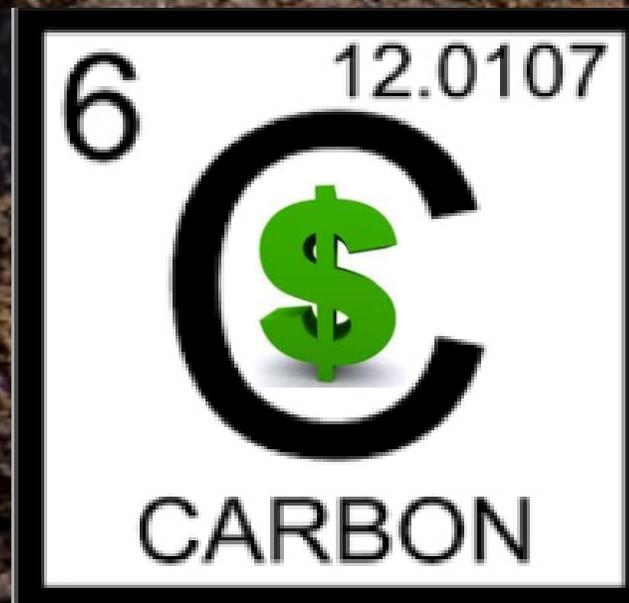

Currency

- Currency is important because it allows goods and services to be exchanged more efficiently

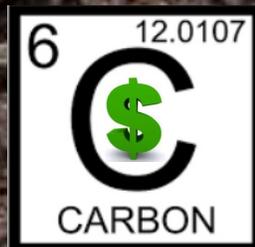

Currency

- In the plant economy, the currency is Carbon

Carbon Currency

- Currency (Carbon) is important because it allows goods and services to be exchanged more efficiently with the soil economy.

Carbon Payments

Root Exudates

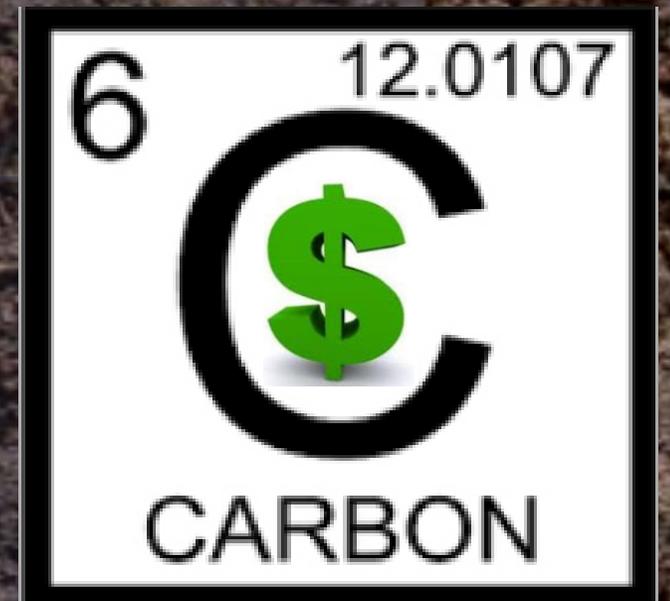

Plant Services

Sourcing, Delivery, Protection

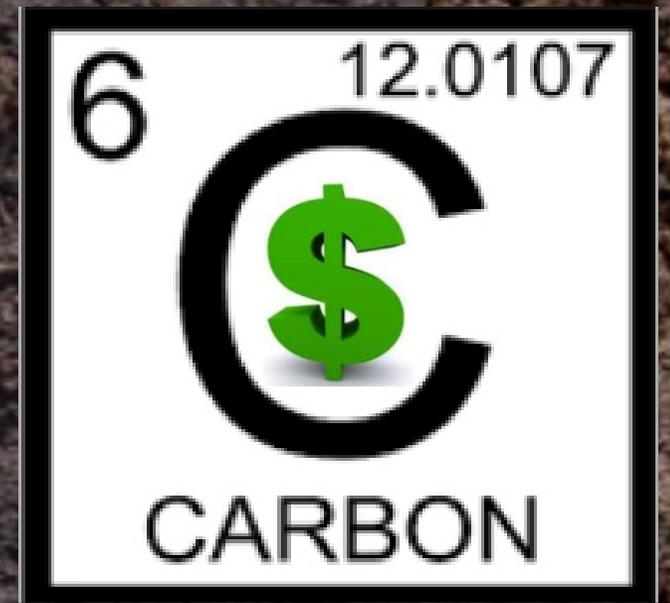

Importance of Carbon

- Carbon is essential to all life
- People are 19% carbon
- Carbon can form over 10 million compounds
- Carbon is the *most important* but *most overlooked* of all plant nutrients
- Carbon is the main food source for soil biology

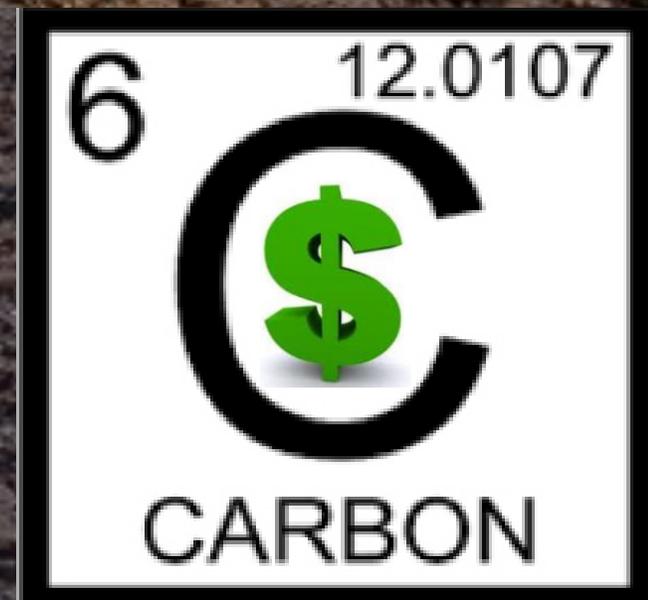

Increased Soil Carbon Currency

- Normalizes soil pH
- Increases CEC
- Increases availability of P, Ca, K, S, Zn, Fe, Mo, B
- Reduces availability of Na and Al

Carbon Currency

- Carbon can be:
 - collected (photosynthesis)
 - spent (traded to soil organisms)
 - saved (soil organic matter)
 - desired by all members of the economy

Carbon Currency

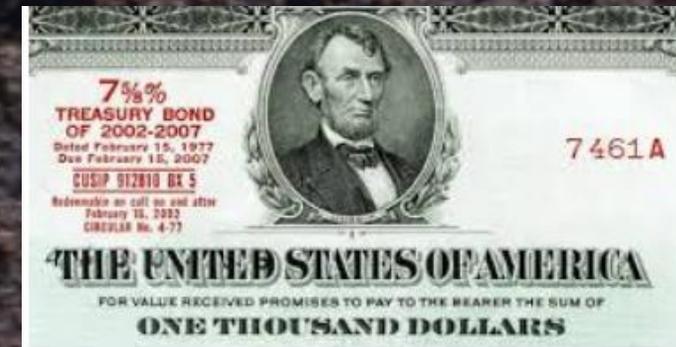

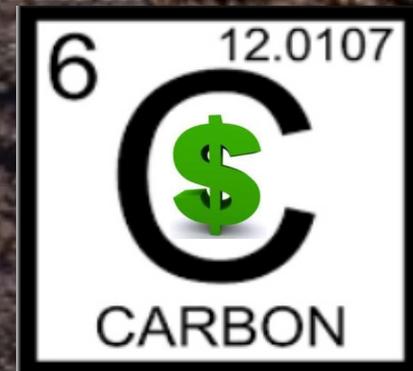

- Carbon has different states

- Gas – CO₂

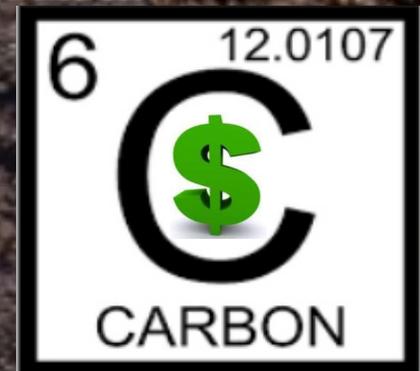

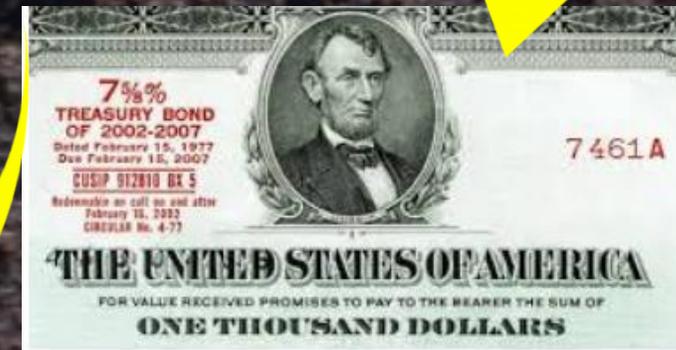

- Liquid – in plants and soils

- Solid – in living organisms and Organic Matter

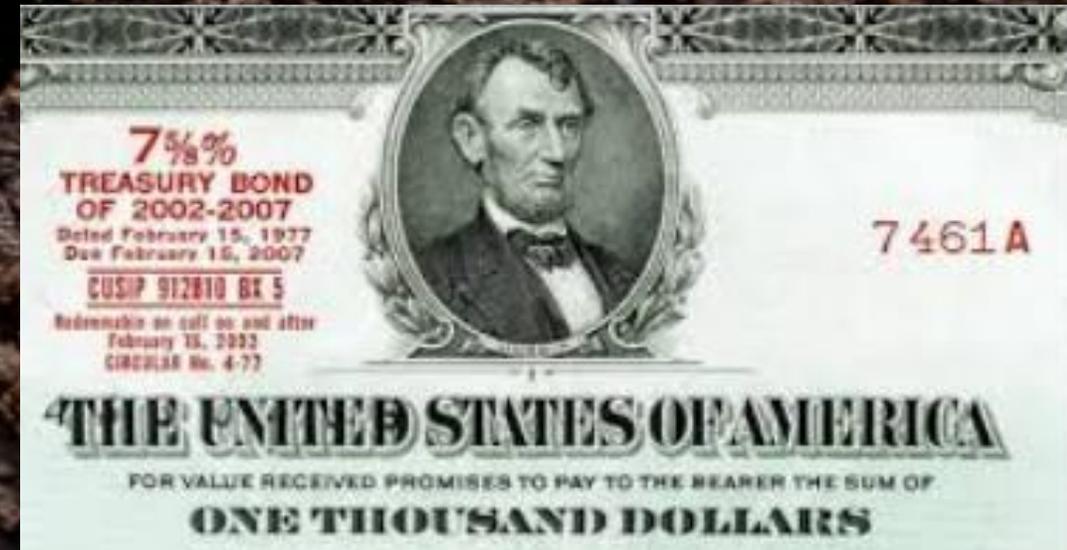

Carbon Currency

- Carbon has different states
 - Gas – CO₂
 - Liquid – in plants and soils
 - Solid – in living organisms and Organic Matter

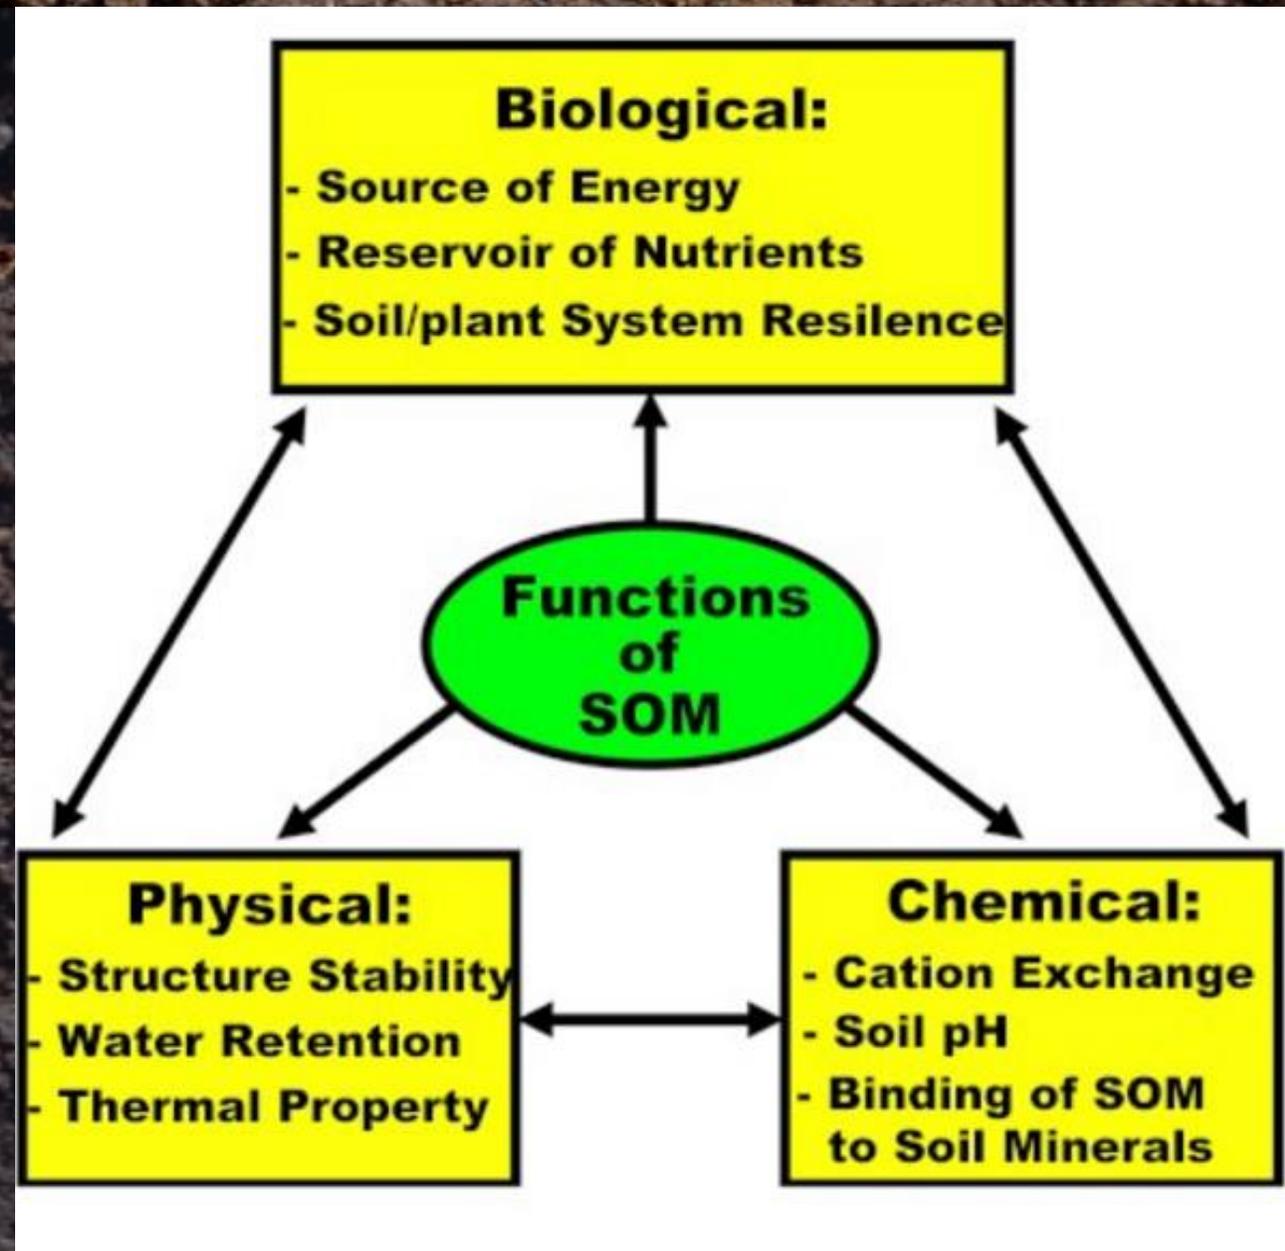

Capital

- Accumulated (stored or saved) currency
- Needed for Growth and Stability

Soil Carbon Capital

- Organic Matter and Humus
- Accumulated (stored or saved) carbon currency
- Needed for Growth and Stability

Benefits of Soil Organic Matter

Jennifer Moore-Kucera NRCS Linking Soil Biology To Soil Health

Food & habitat
for soil organisms

Increased
microbial activity,
decomposition,
mineralization

Increased microbial
biomass, competition
& antagonism against
plant pests

Increased
infiltration and
water-holding
capacity

Protect surface
from solar energy
and raindrops

Increased CEC &
adsorption of
organic
compounds

Buffers
temperature
extremes

Increased supply
of micro- and
macro-nutrients

Increased
aggregate stability,
macroporosity

Capital Rich Economies

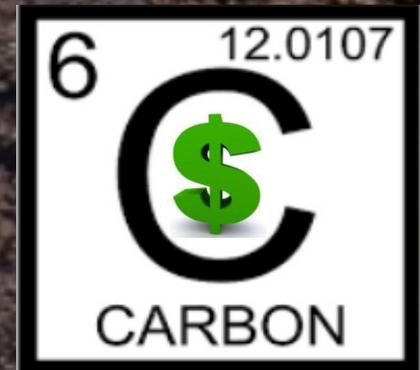

High Organic Matter Soils

- Productive
- Stable
- Resilient
- Efficient

- Productive
- Stable
- Resilient
- Efficient

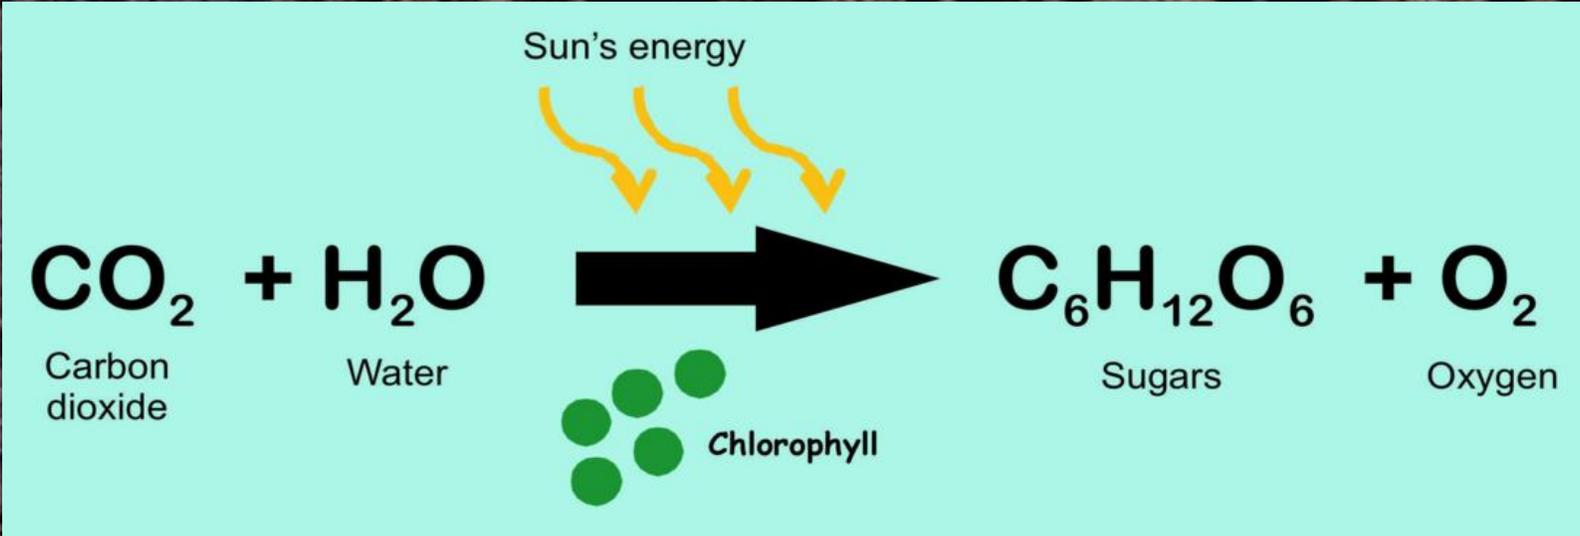

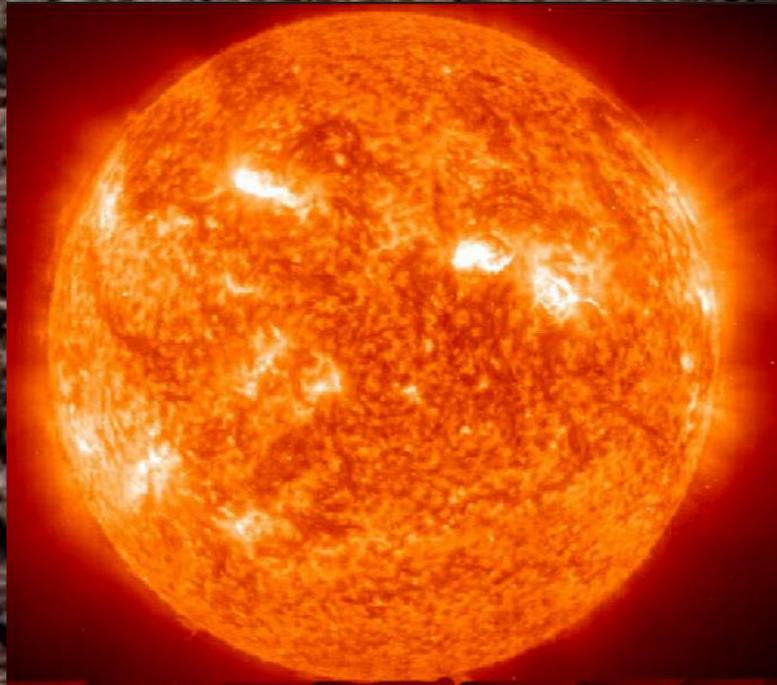

Carbon Capital

- Capital (Savings) can't be increased without an excess of cash income
- Soil Organic Matter can't be increased without an excess of soil carbon currency
- Soil Carbon can't be increased in most rotations without the use of cover crops

Energy and Resources

- Plant economy energy comes from the sun

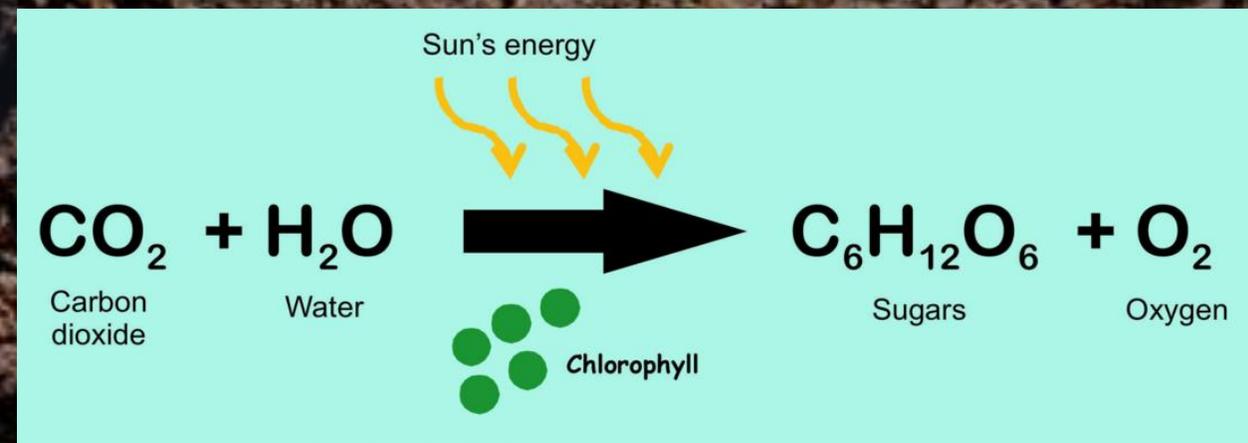

Energy and Resources

- Plant economy energy comes from the sun
- Plant solar collectors (seeds) are **MUCH** cheaper and easier to install than man-made solar panels!

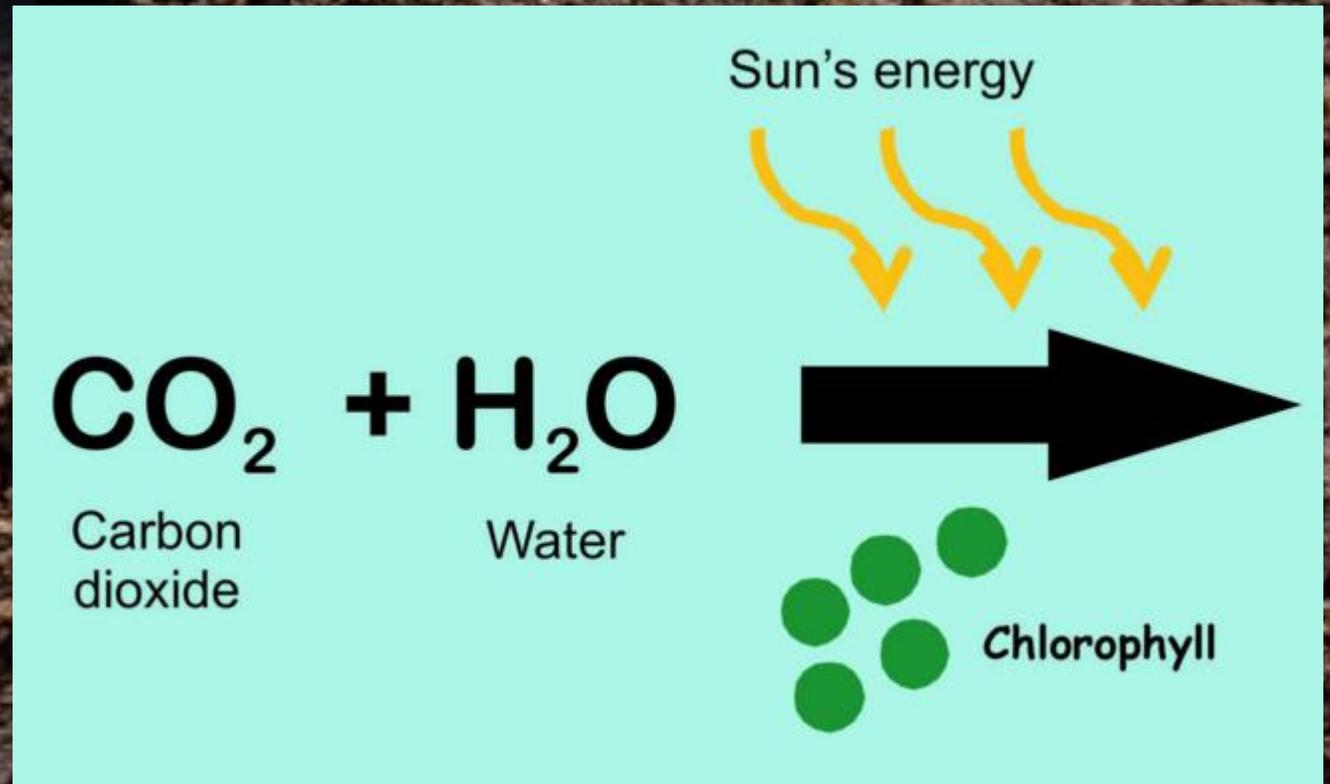

Energy and Resources

- Plant economy energy comes from the sun
- Plant solar collectors (seeds) are MUCH cheaper than man-made solar panels!
- A healthy soil economy should not need significant purchased energy inputs

Energy and Resources

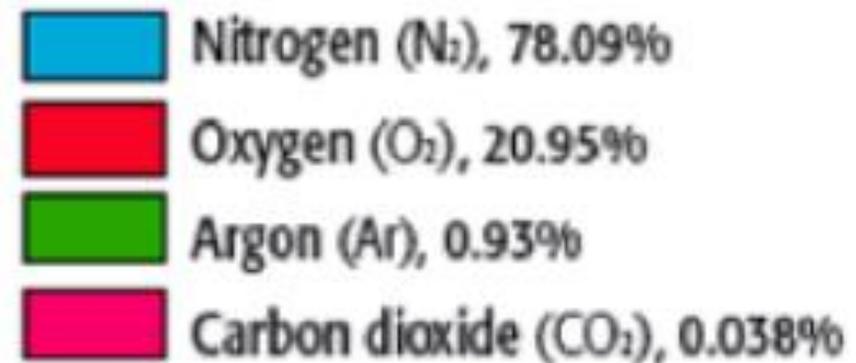

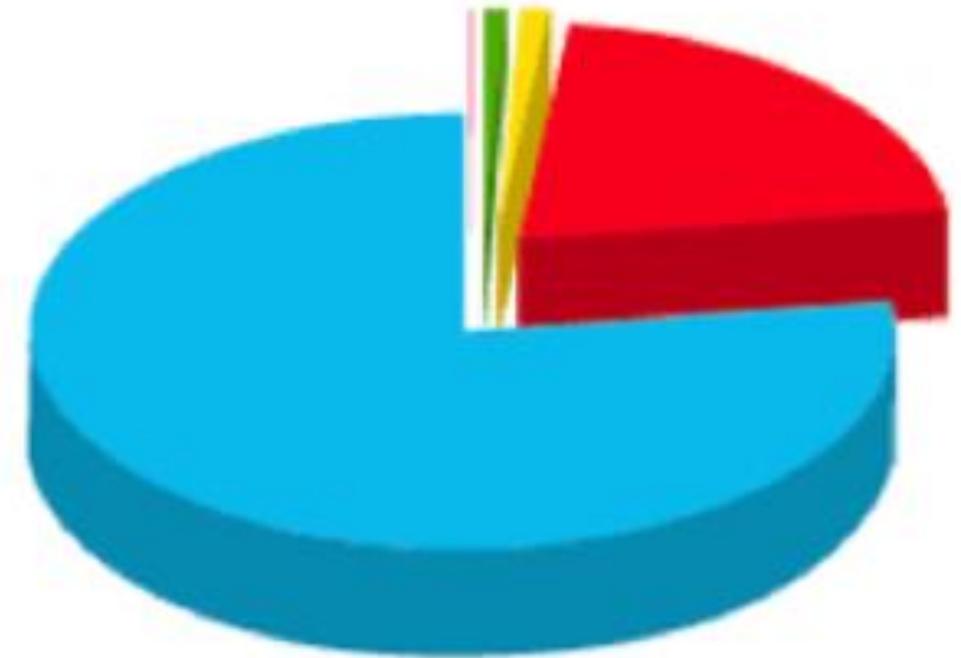

- Plant economy resources
- #1 is CARBON

Energy and Resources

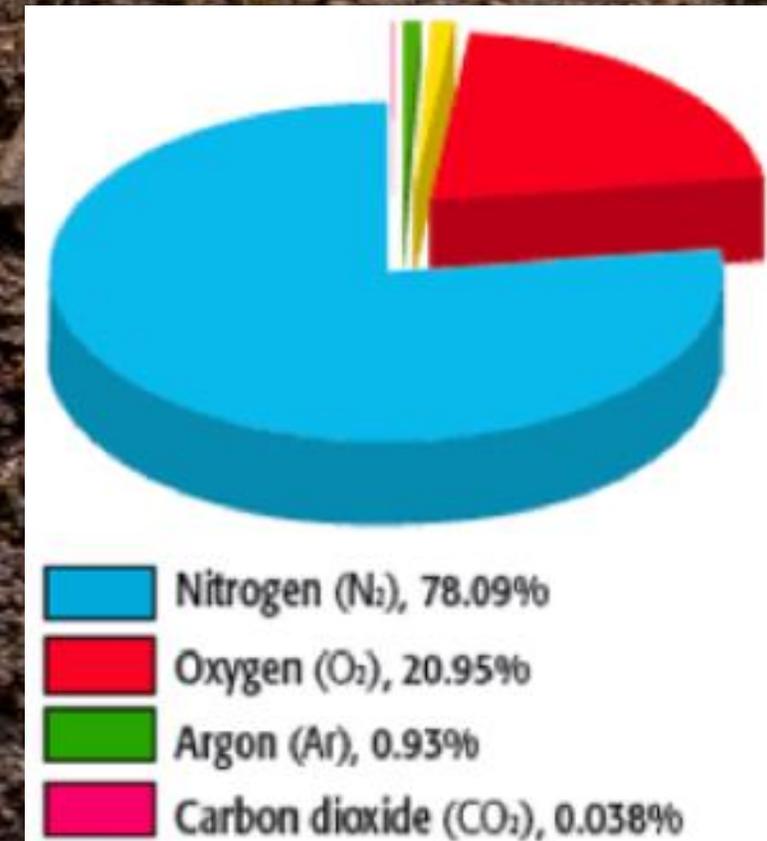

- Plant economy resources
- #1 is CARBON
- #2 is NITROGEN

Atmospheric composition

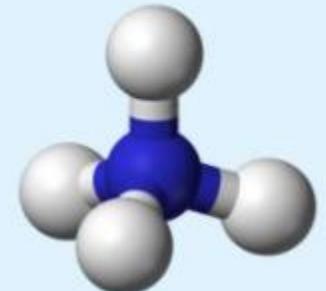

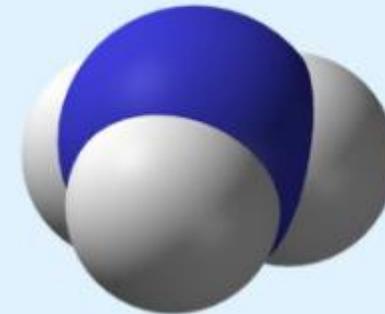

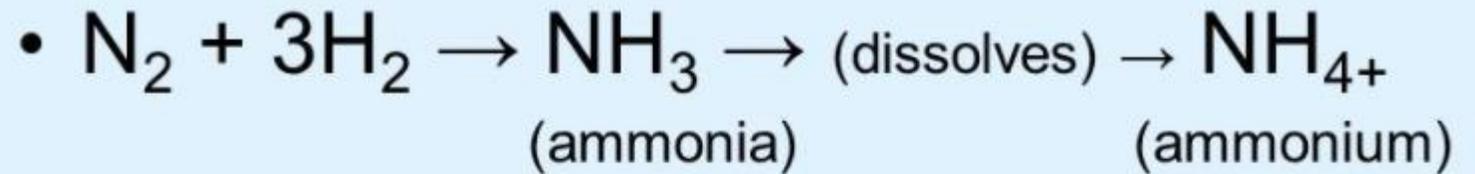

Energy and Resources

- Plant economy resources
- #1 is CARBON
- #2 is NITROGEN

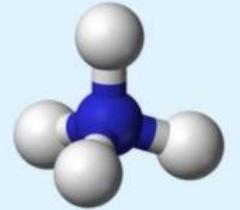

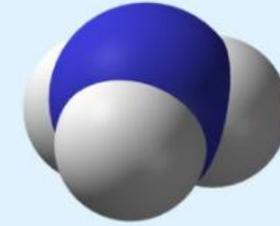

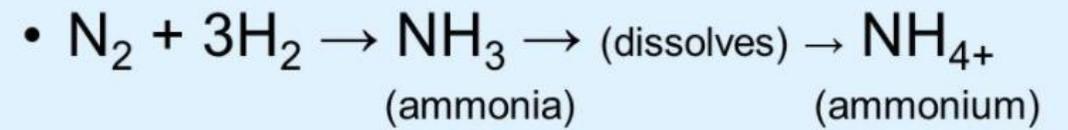

Energy and Resources

- Nitrogen gets “fixed” or made plant available when combined with hydrogen or oxygen

Energy and Resources

- Nitrogen gets “fixed” or made plant available when combined with hydrogen or oxygen
- Very energy intensive process

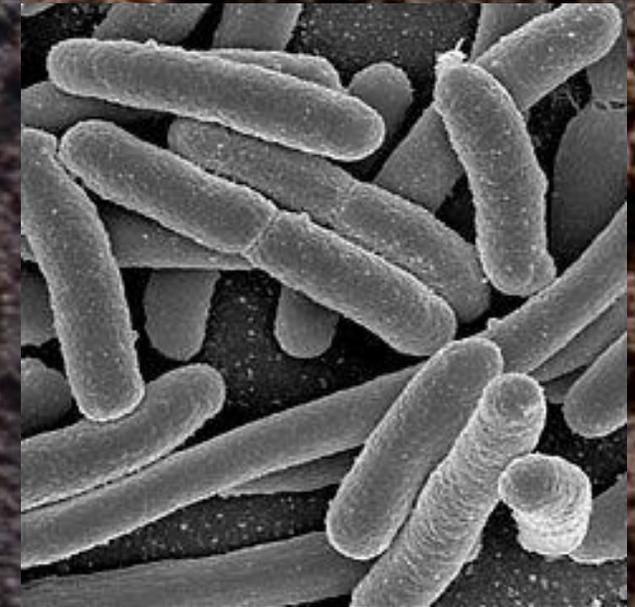

Energy and Resources

Rhizobia Bacteria

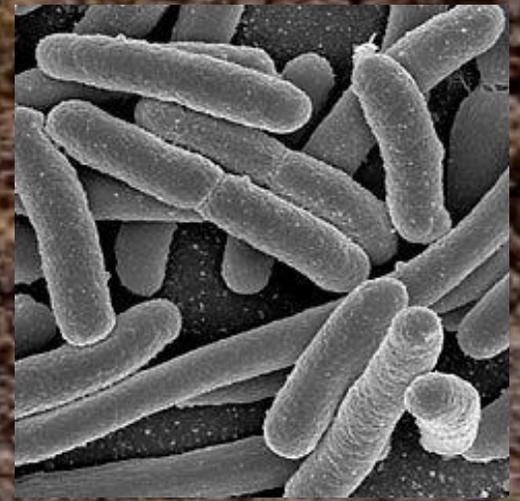

Nitrogen Factories

- Azospirillum
- Azotobacter
- Not limited to legumes

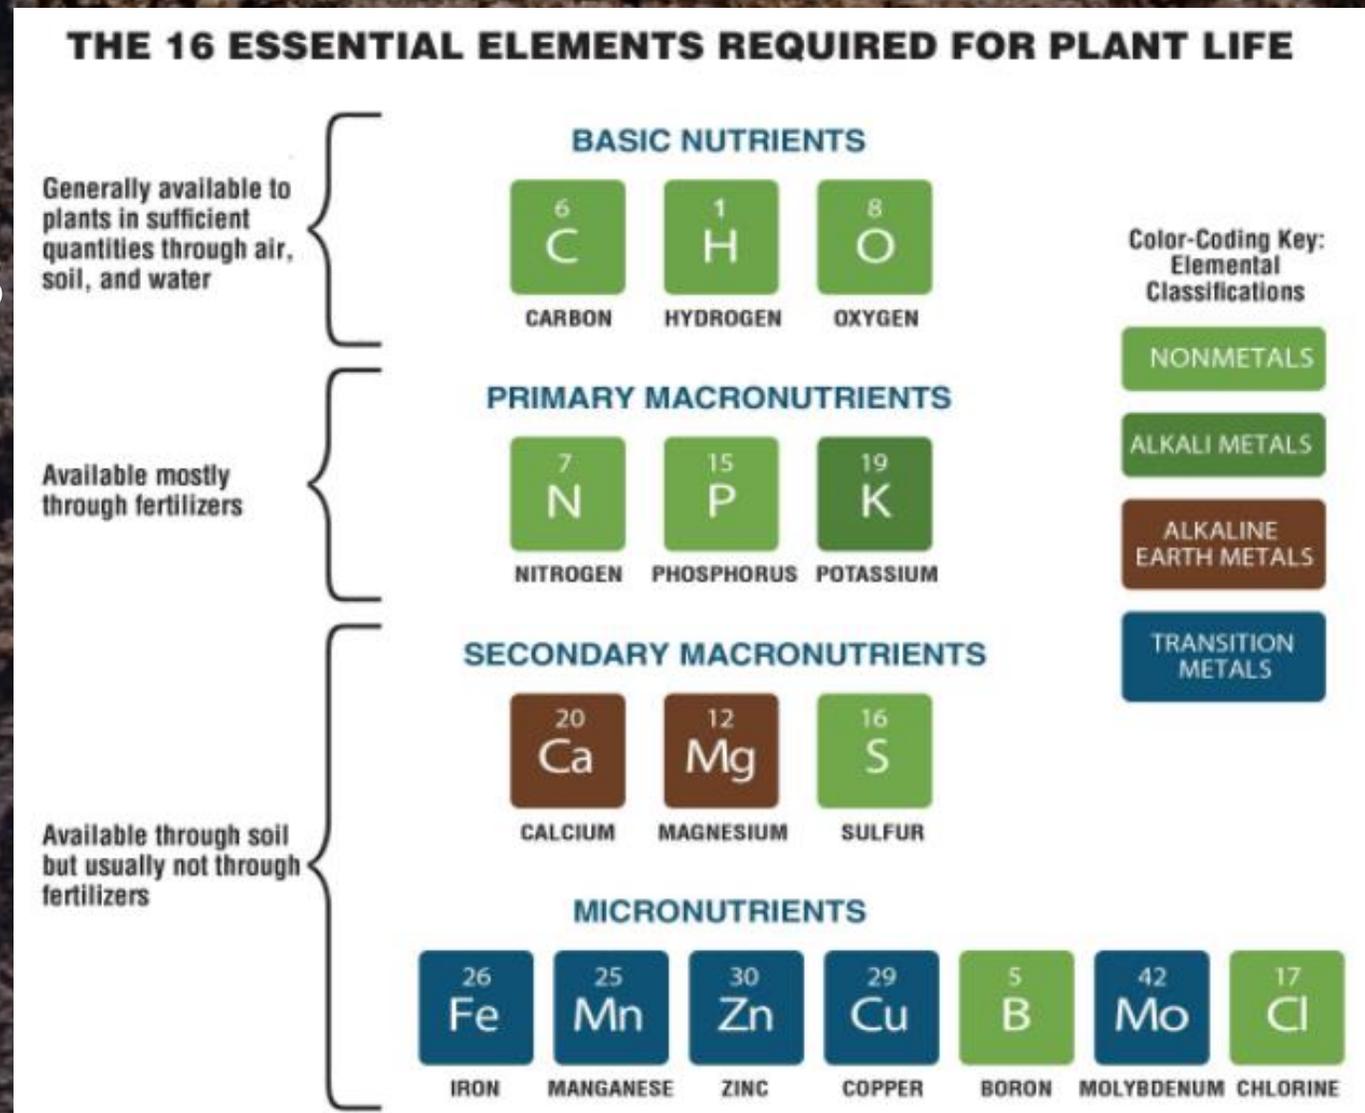

Nitrogen Factories

- Azospirillum
- Azotobacter
- Rhizobia
- Must associate with a plant
- “Trade” nitrogen to the plant for carbon
- Will not happen if excess N is in the soil

Energy and Resources

- Plant economy resources
- #1 is CARBON
- #2 is NITROGEN
- Other mineral resources

Energy and Resources

- Plant economy resources
 - #1 is CARBON
 - #2 is NITROGEN
- Other mineral resources
- Employ tiny miners to extract the nutrients from the soil.

Mycorrhizal Fungi run the Largest Mining Operation in the World

Up to 85% of plants depend on fungi to survive. Plants and fungi depend on each other for nutrient cycling and water absorption

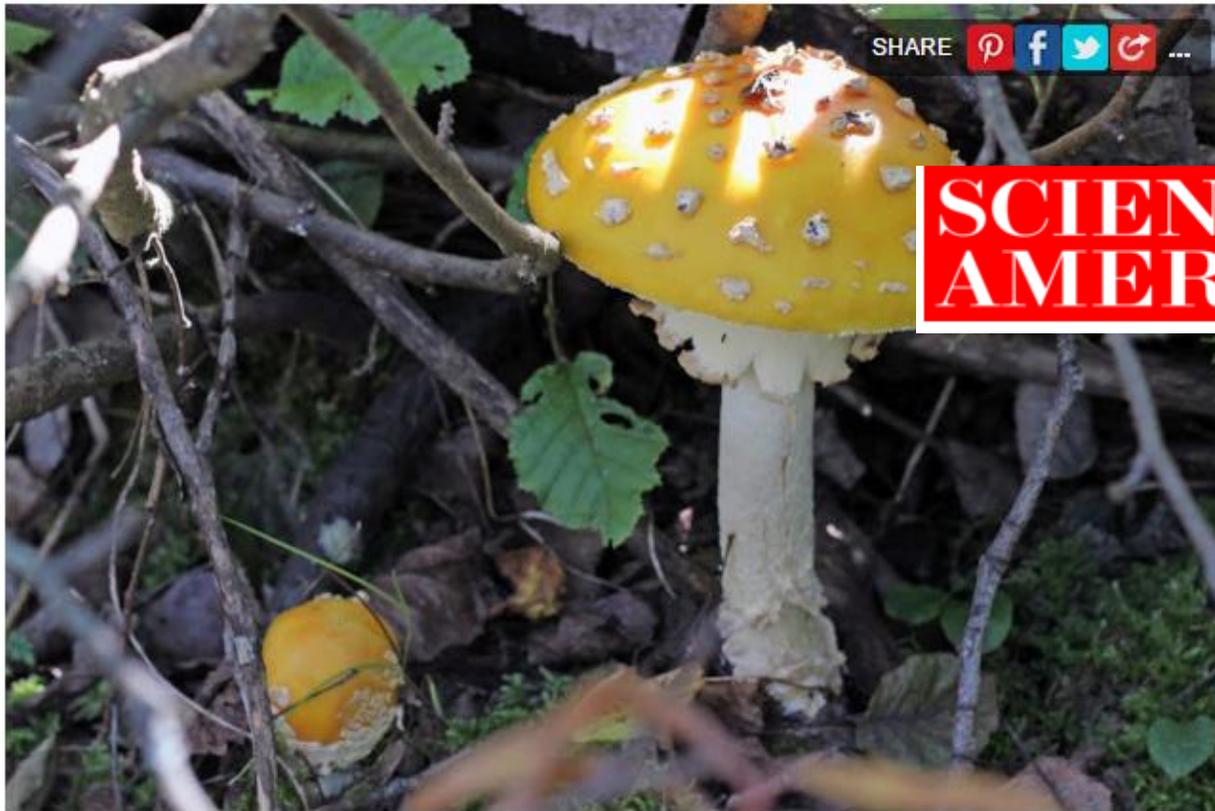

Photo: Amanita gemmata by Courtney Celley; US Fish & Wildlife Service

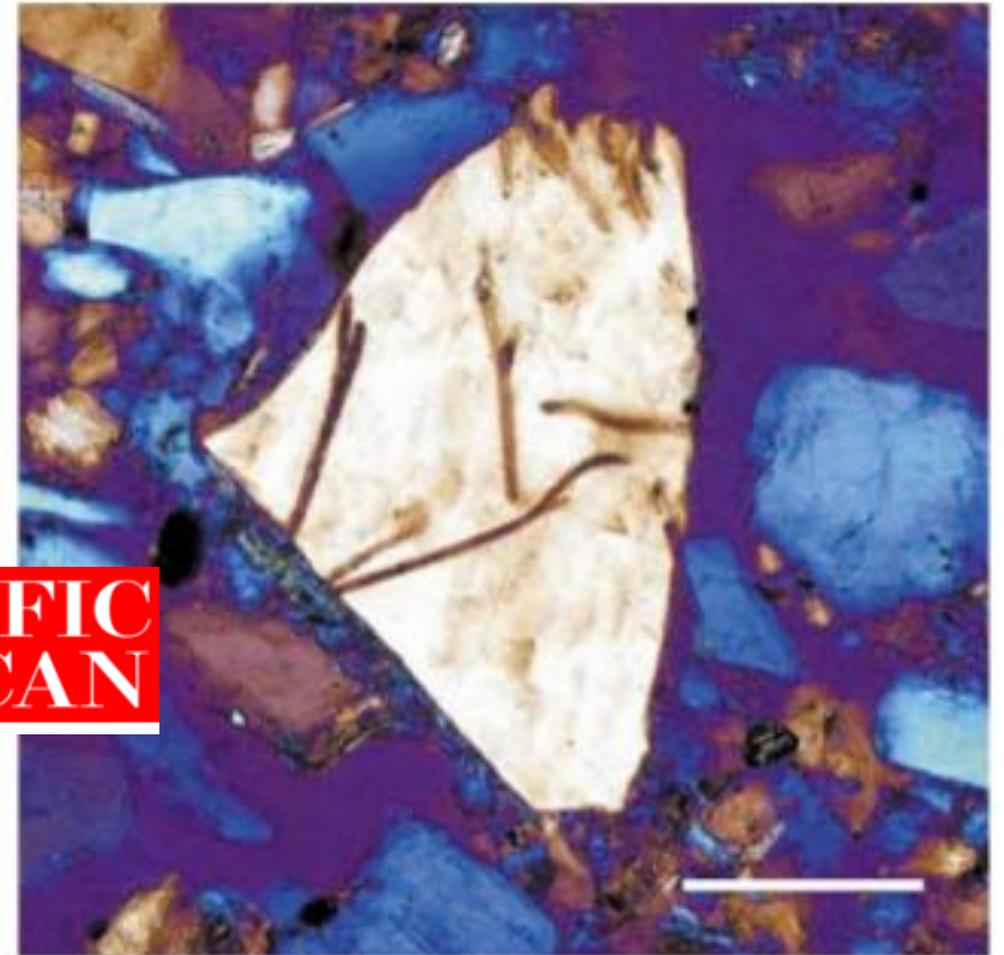

Image: Landeveert 2001

Thin-section micrograph of a tunneled feldspar
Scale bar = 100 micrometers

Arbuscular Mycorrhizal Fungi

Mineral Resources

- Mycorrhizal fungi mine the soils not only for the basic nutrients like nitrogen, phosphorus, etc, but also those hard to come by trace elements (Zinc, Copper, Manganese, etc) which plants need for strong immune system health and survival.... Oddly enough many soils are rich in important nutrients, but they are often locked up in a physical form which makes them unavailable to most plants.

(Source: Scientific American - Jennifer Frazer)

infrastructure

noun | in·fra·struc·ture | \ˈin-frə-,strək-chər, -(.)frä-\

Simple Definition of INFRASTRUCTURE

Popularity: Top 20% of words

: the basic equipment and structures (such as roads and bridges) that are needed for a country, region, or organization to function properly

- Transportation
- Communication
- Economies will be severely crippled or limited when these are lacking or disrupted (war strategies)

infrastructure

Infrastructure

Carbonomic\$ - The Wonderful Economy of the

Keys To A Healthy **SOIL!**

National Highway System (NHS)

Carb

**NON-MYCORRHIZAL
ROOTS**

**ROOTS WITH
MYCORRHIZAL FUNGI**

Mycorrhizal fungi transports:

- Phosphorus – one of the hardest to access
- Nitrogen, Potassium, Calcium, Magnesium, Iron
- Zinc, Boron, Manganese and Copper.
- In dry times they help transport and supply water.

Transportation Infrastructure

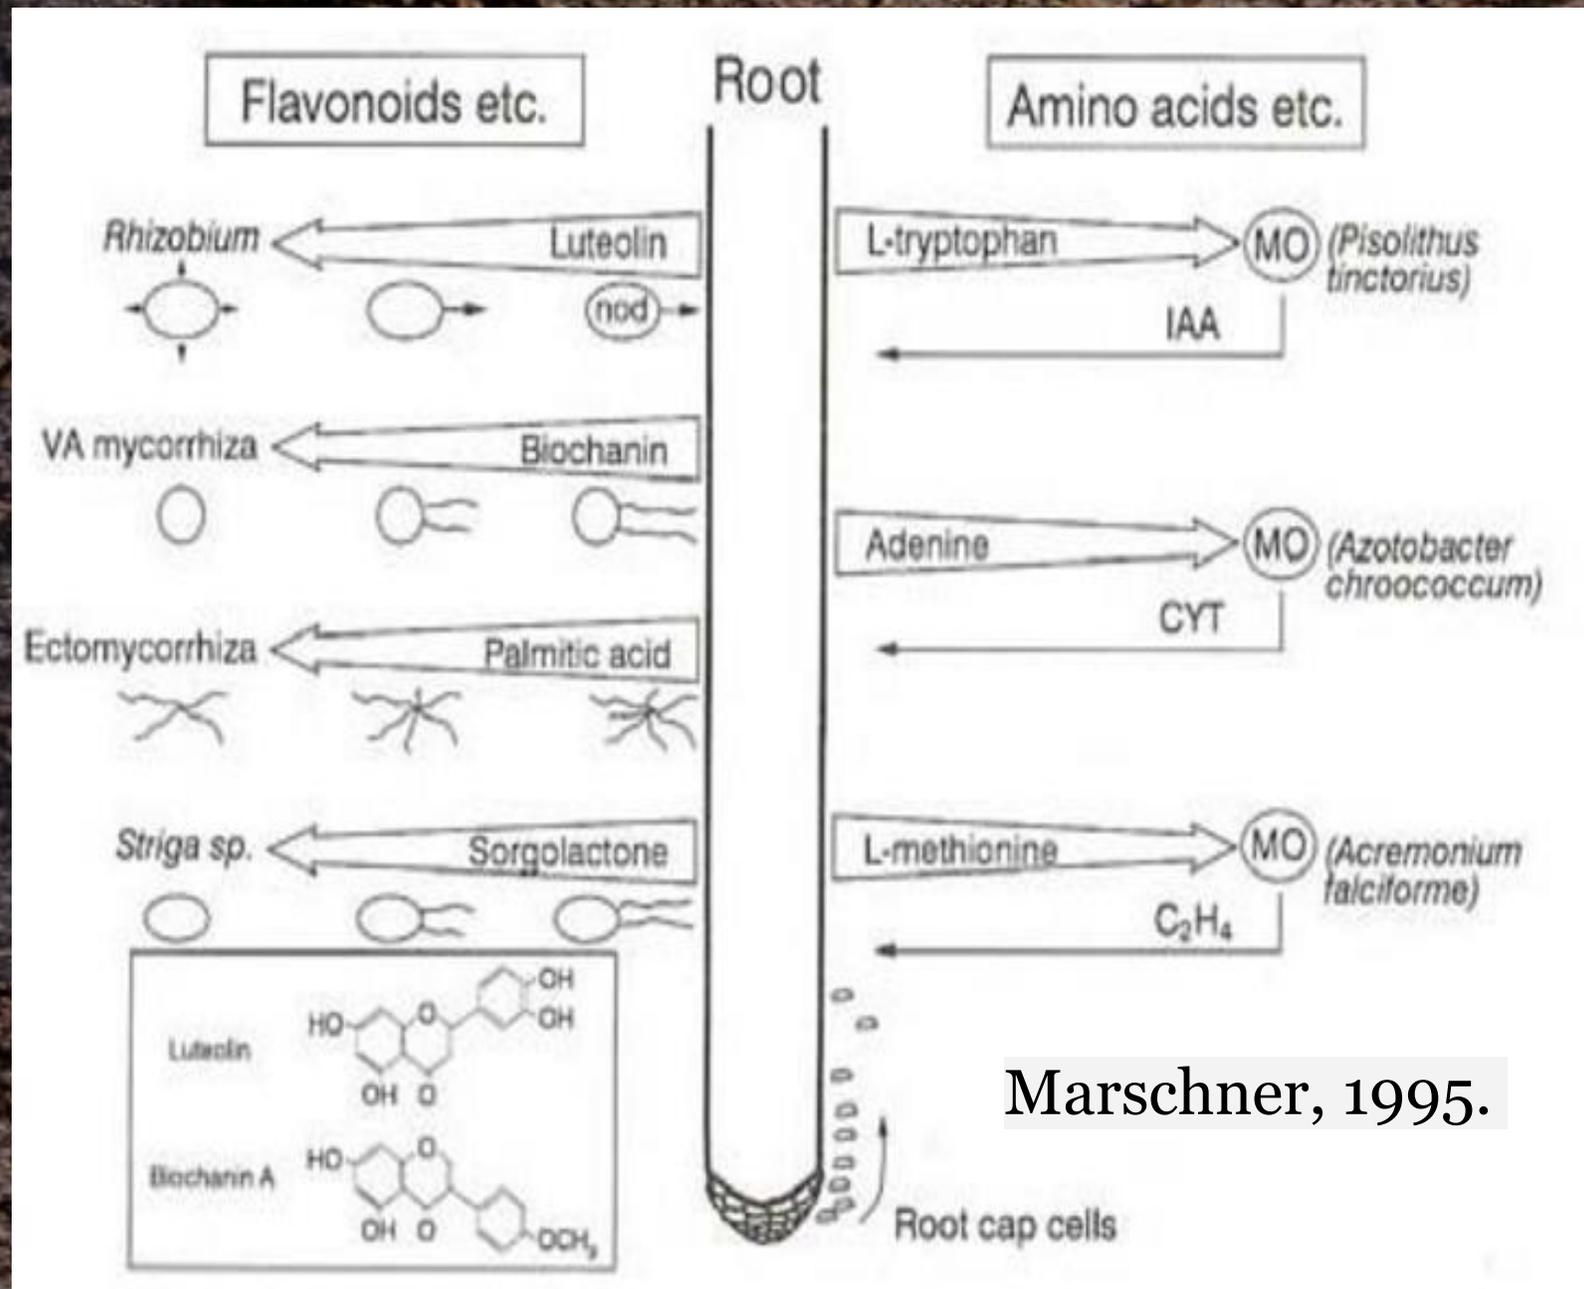

Earth worms
help transport:

- Water
- Oxygen
- Surface carbon (residue)
- Other biota

Communication Infrastructure

Plants use liquid carbon root exudates to communicate to soil biota what they need

Marschner, 1995.

Communication Infrastructure

Plants use liquid carbon root exudates to communicate to soil biota what they need

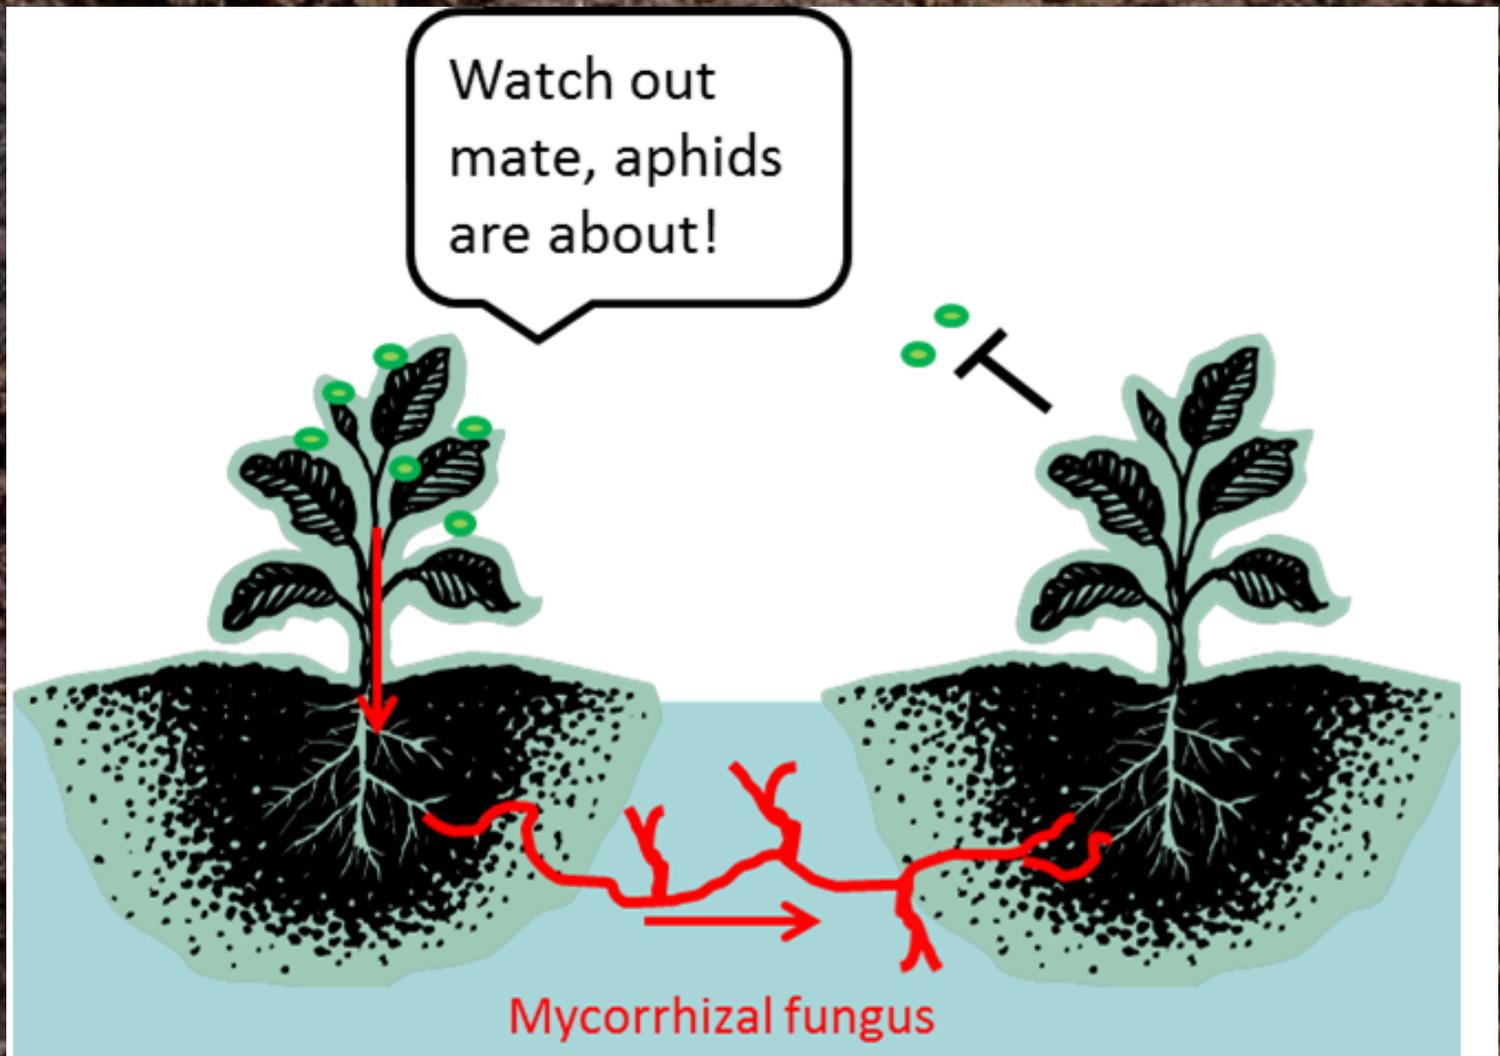

Carbon Compounds

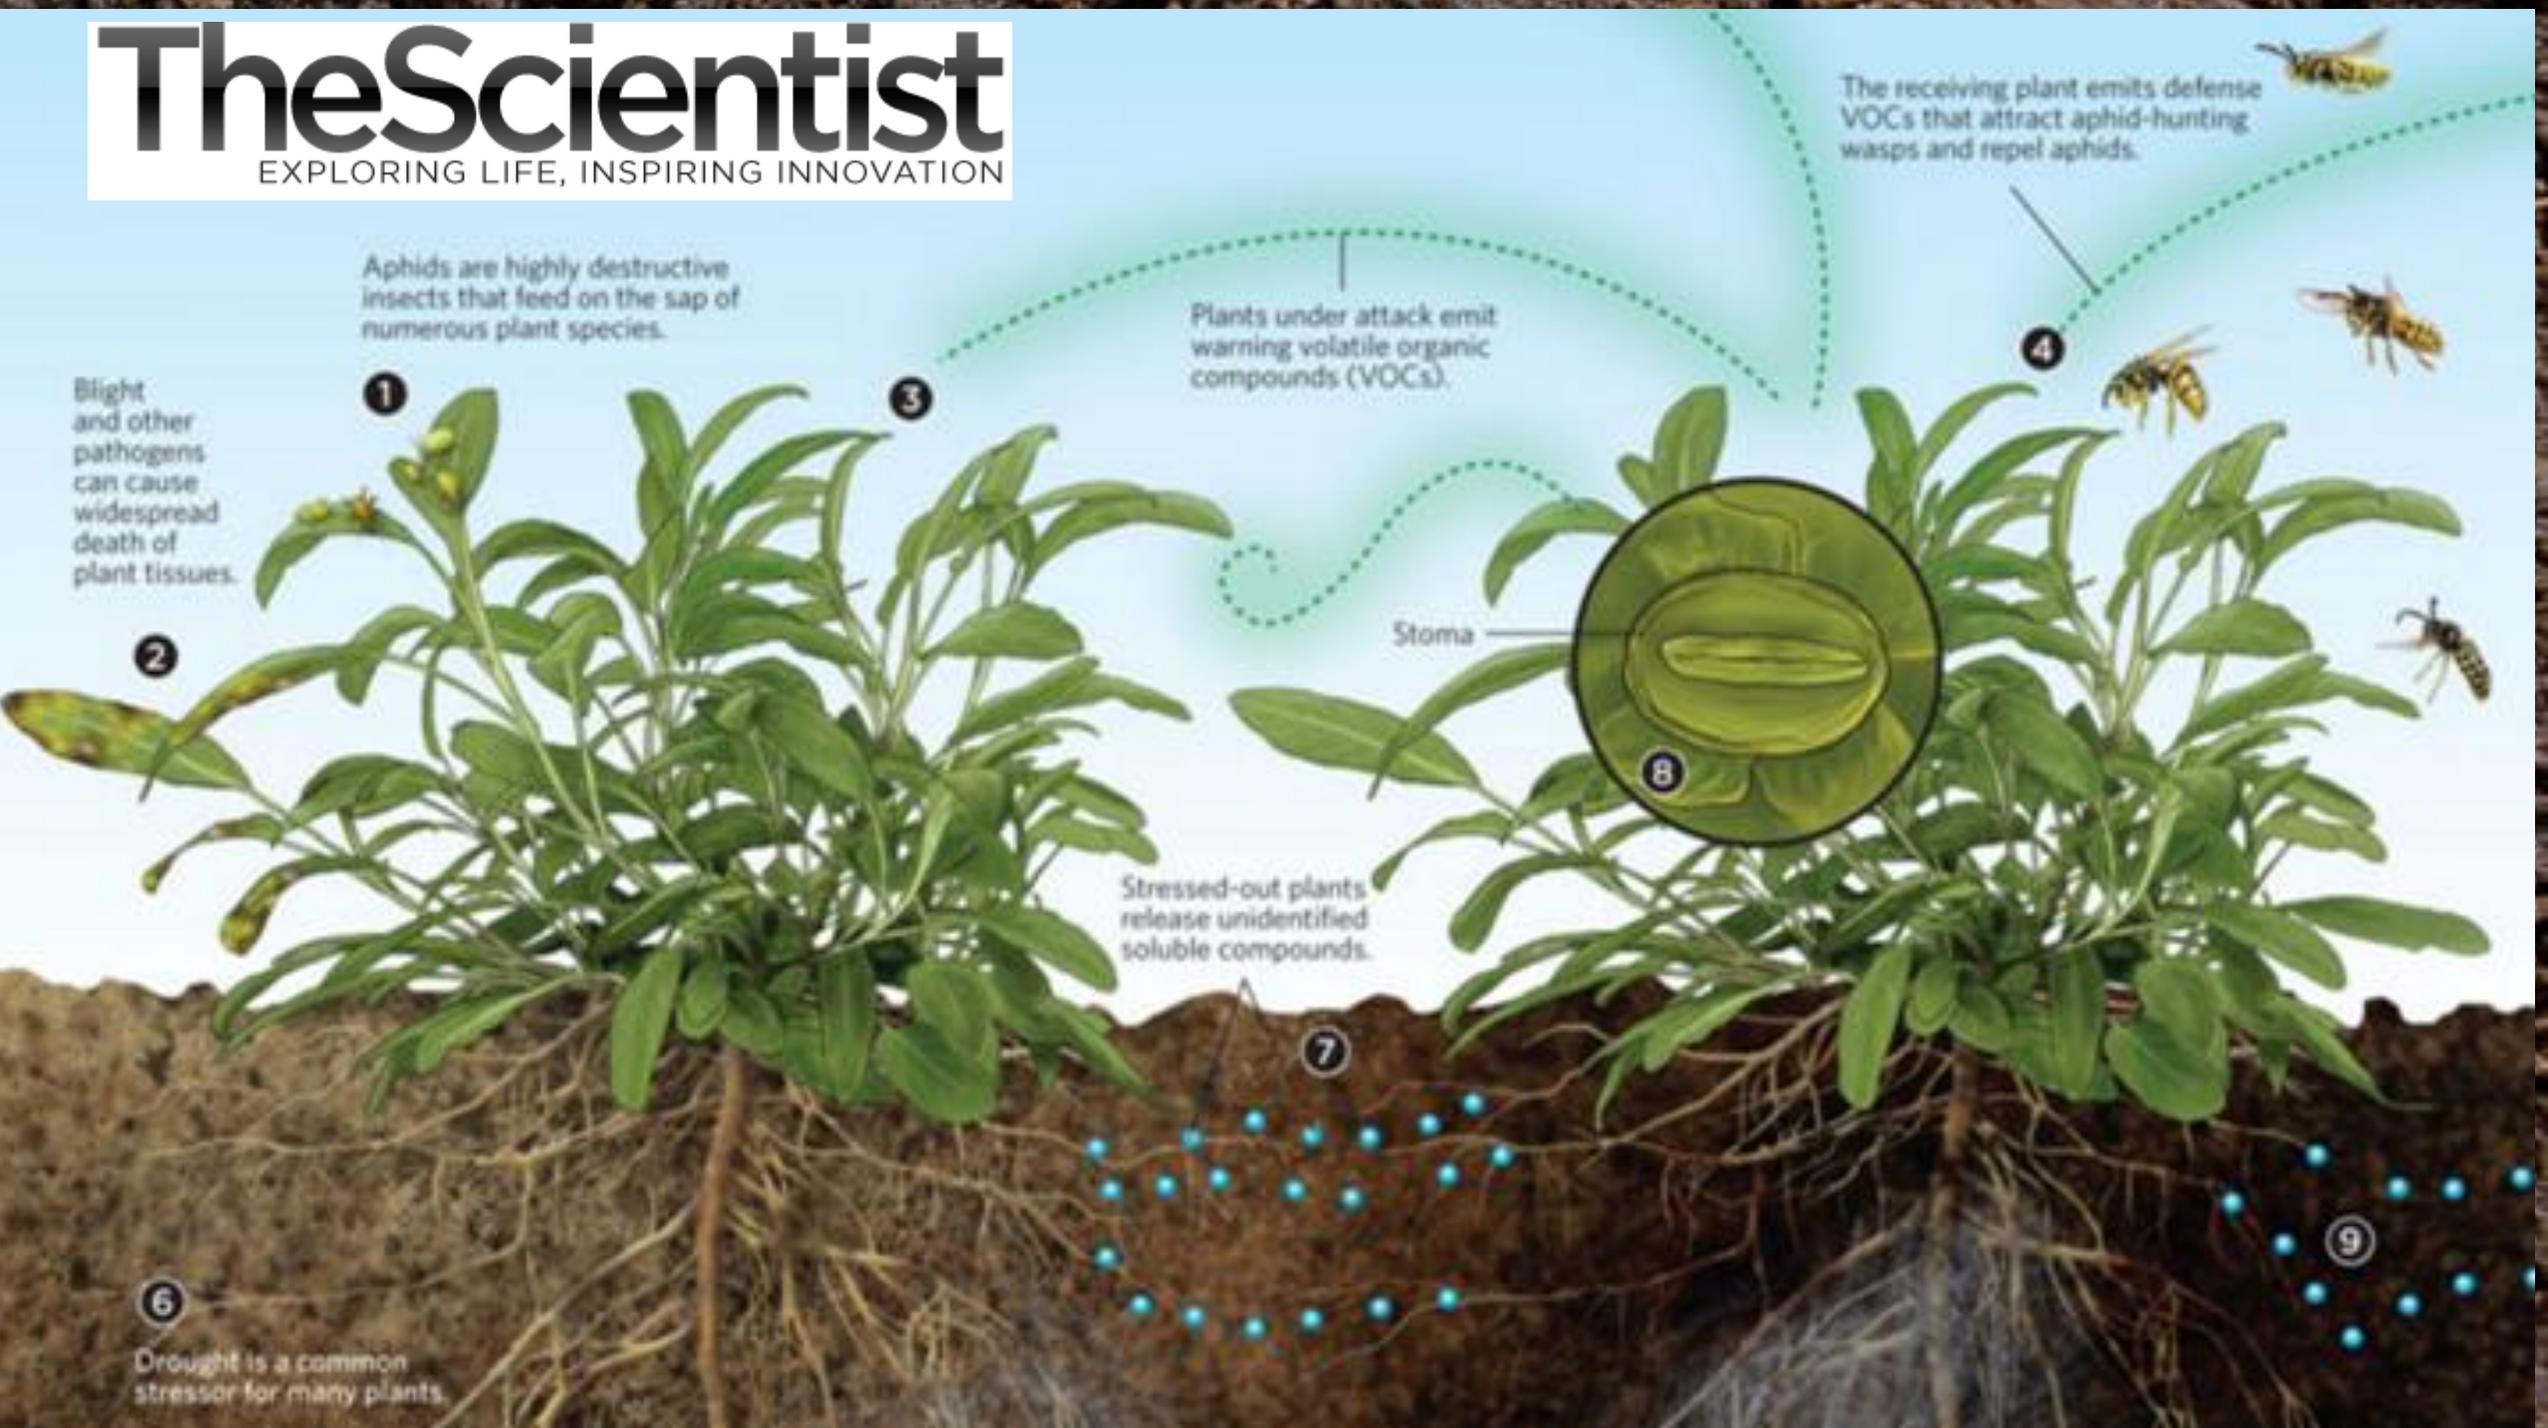

- Carbohydrates
- Sugars
- Proteins
- Fats
- Lipids
- Oils

Communication Infrastructure

Mycorrhizal networks interconnect root systems and allow plants to communicate threats through chemical signaling

When aphids infect the plant on the left a signal travels to through the mycorrhizal network warning other (uninfected) plants that aphids are nearby. This induces defence responses that include the production of methyl salicylate, which repels the aphids and attracts the parasitoid wasp (an aphid predator).

Aphids are highly destructive insects that feed on the sap of numerous plant species.

Blight and other pathogens can cause widespread death of plant tissues.

Plants under attack emit warning volatile organic compounds (VOCs).

The receiving plant emits defense VOCs that attract aphid-hunting wasps and repel aphids.

Stoma

Stressed-out plants release unidentified soluble compounds.

Drought is a common stressor for many plants.

Defense and Protection

The plant/soil economy needs protected from:

- Water (too much or too little)
- Wind
- Heat
- Cold
- Compaction
- Weeds
- Insects
- Diseases

Defense and Protection

The first line of defense is soil armor (cover)

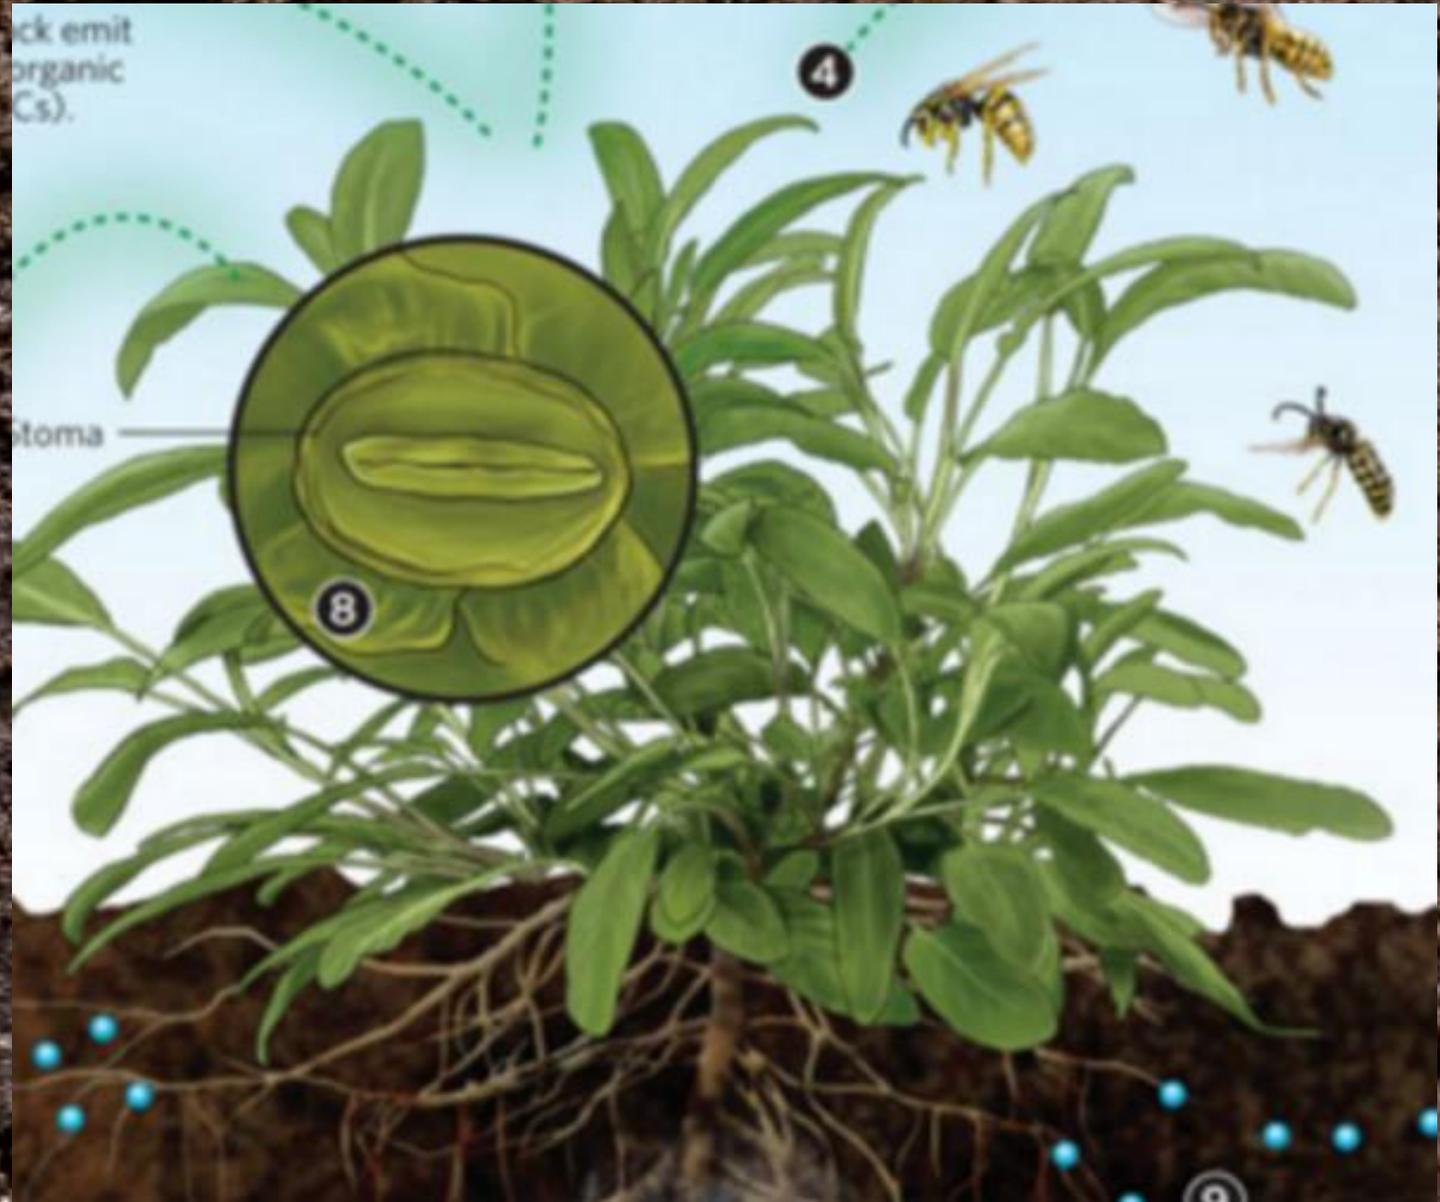

Almost all advantages of the No-tillage system come from the permanent cover of the soil, and only few from not tilling the soil.

We should always aim at full soil cover.

Rolf Derpsch

Defense and Protection

The second line of defense is plant signaling - plants signaling each other and signaling insects and soil organisms to assist in defense

Defense and Protection

*This Rock Cress plant infected with the pathogen *Pseudomonas syringae* shows typical yellowing and disease symptoms.*

Photo by Thimmaraju Rudrappa

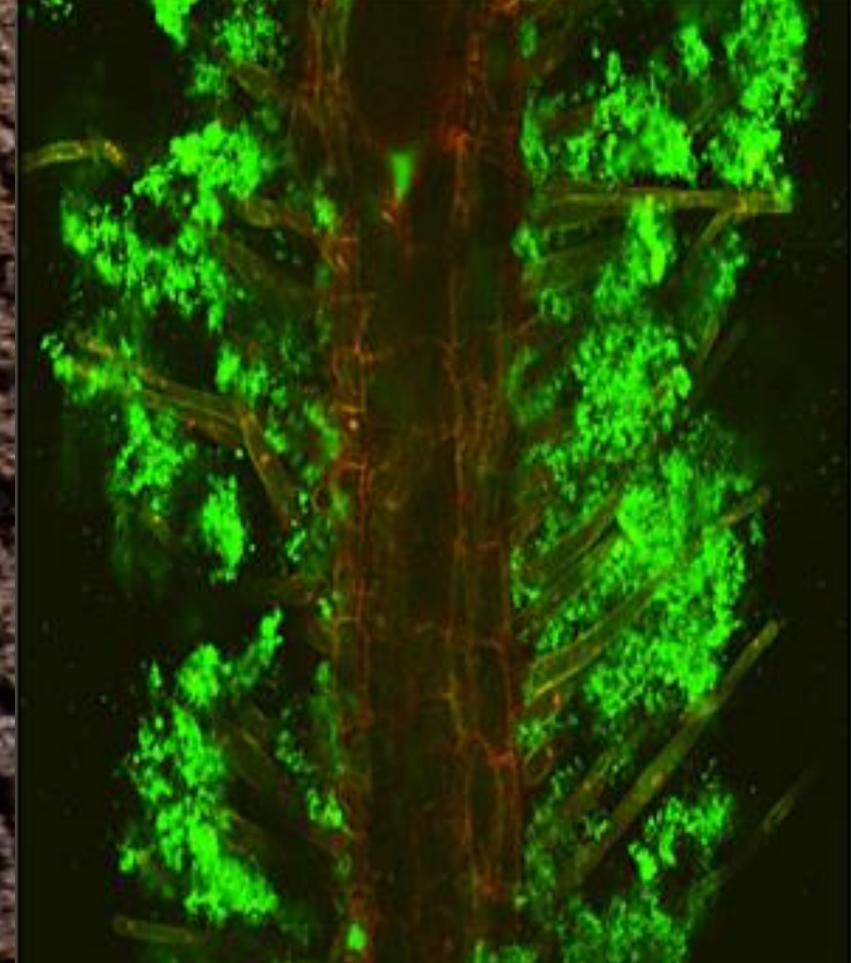

*This plant's roots were treated with the beneficial bacterium *Bacillus subtilis*.*

Photo by Thimmaraju Rudrappa

UNIVERSITY *of* DELAWARE

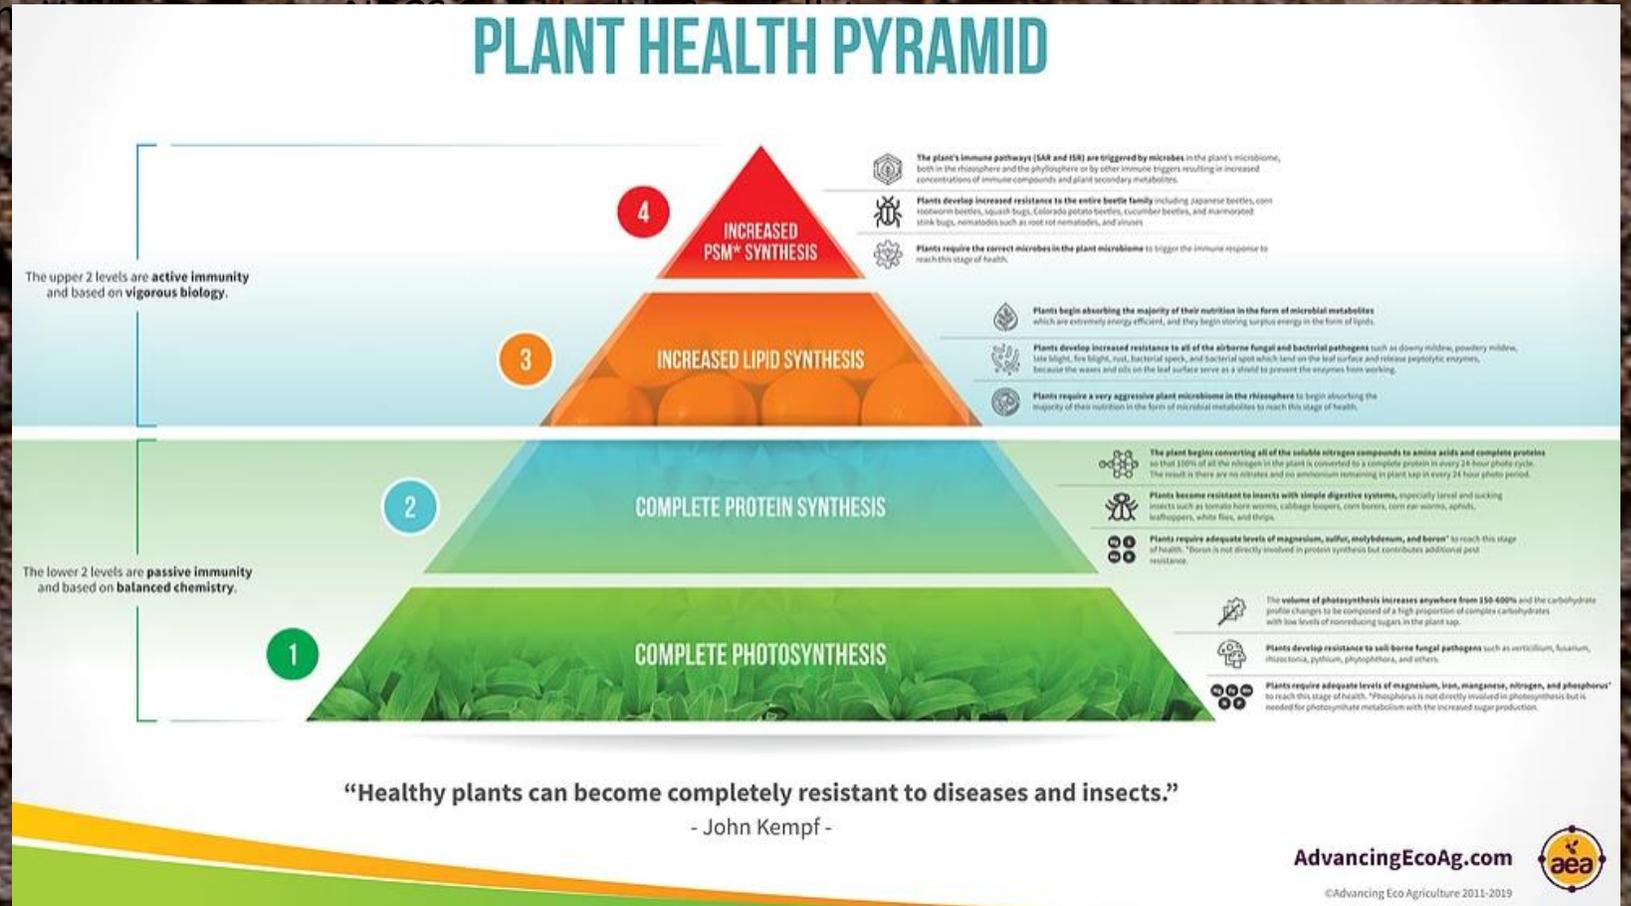

*The green represents the beneficial bacterium *Bacillus subtilis*, which has formed a biofilm on the Rock Cress root surface.*

Photo by Thimmaraju Rudrappa

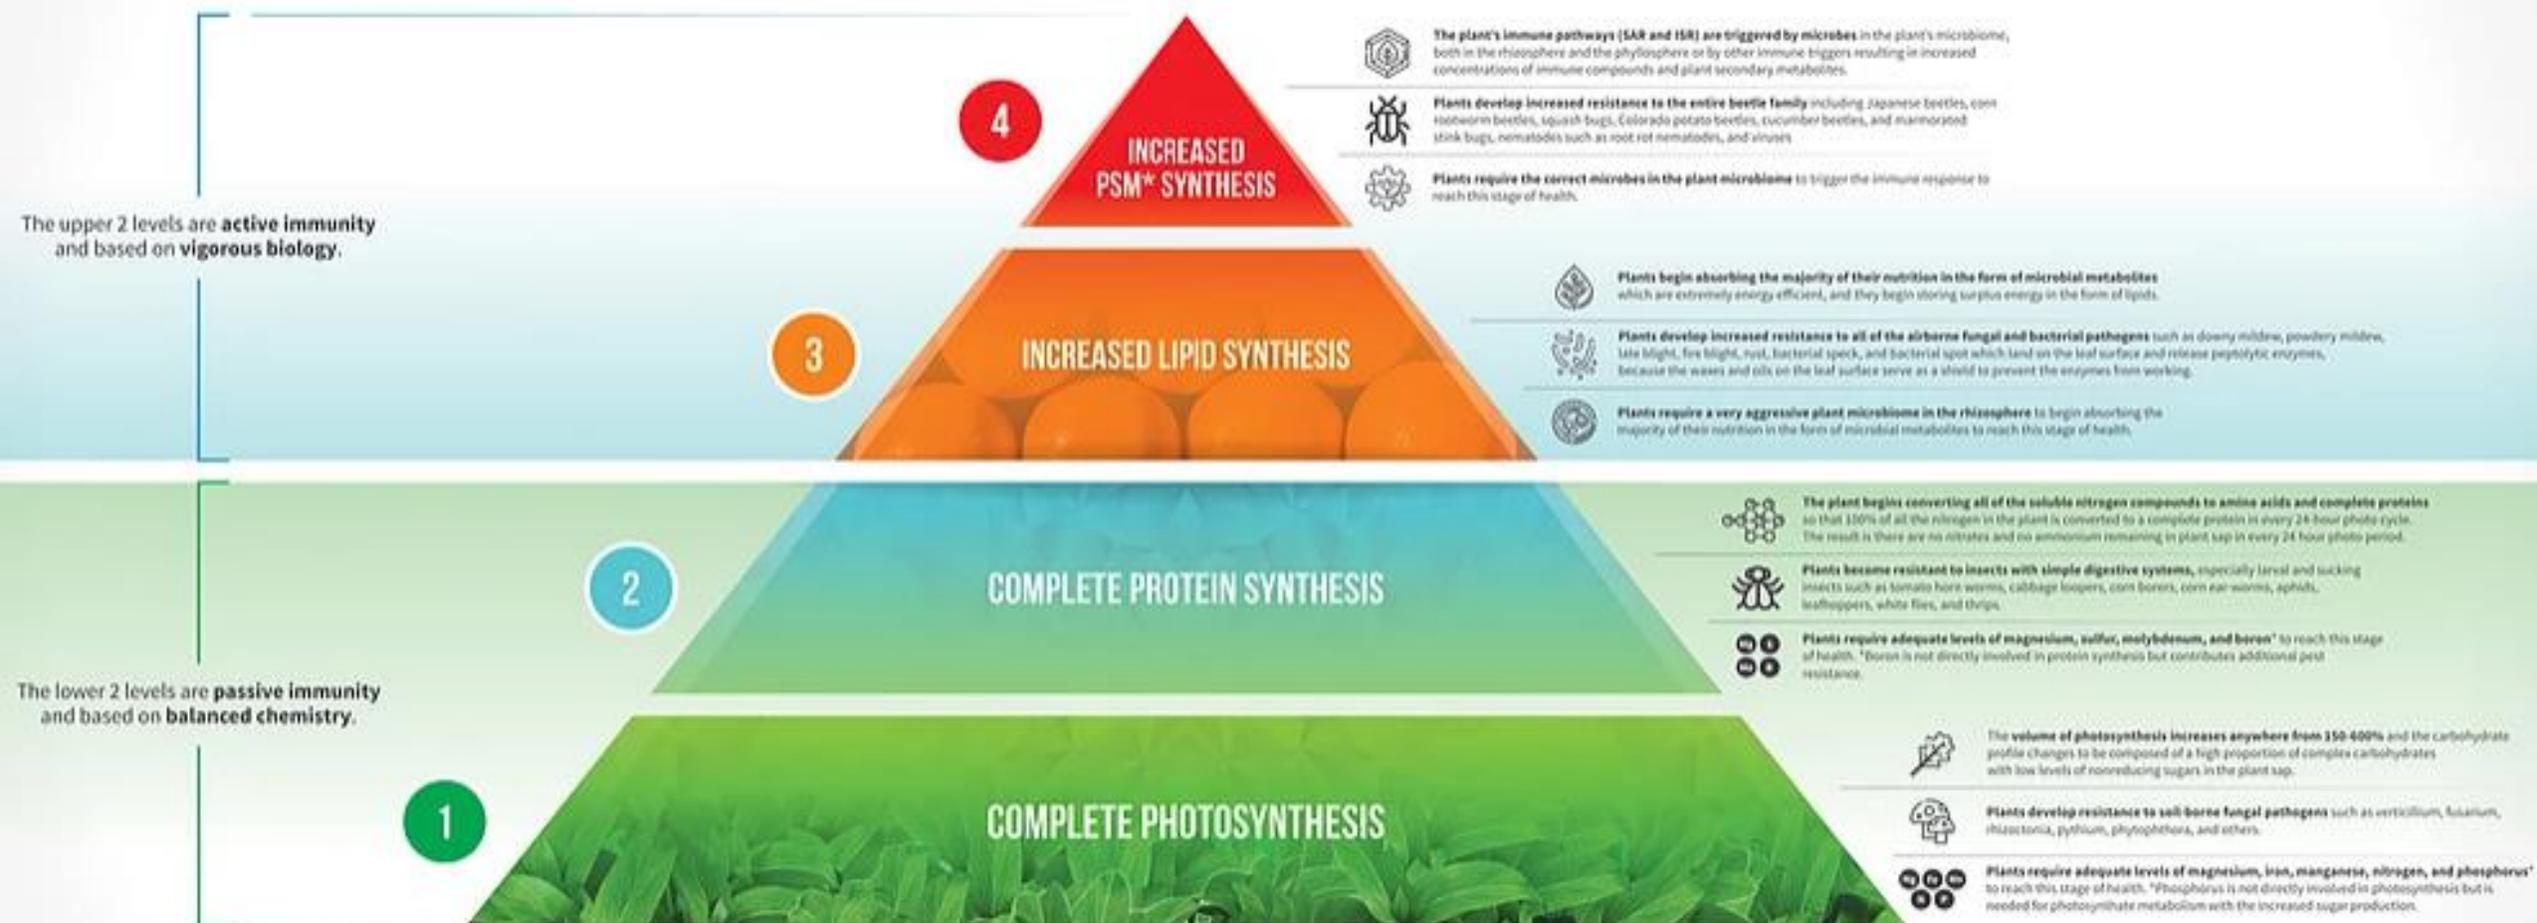

Defense and Protection

The third line of defense is healthy plants producing complex compounds which give natural resistance

From

PLANT HEALTH PYRAMID

“Healthy plants can become completely resistant to diseases and insects.”

- John Kempf -

Defense and Protection

The fourth line of defense is symbiotic relationships between plants and organisms such as endophyte fungus

Noble Research Institute

Defense and Protection

- The fifth line of defense is Diversity - of plants, roots, types, seasons, insects, biota
- Most attackers will focus on only one or two things

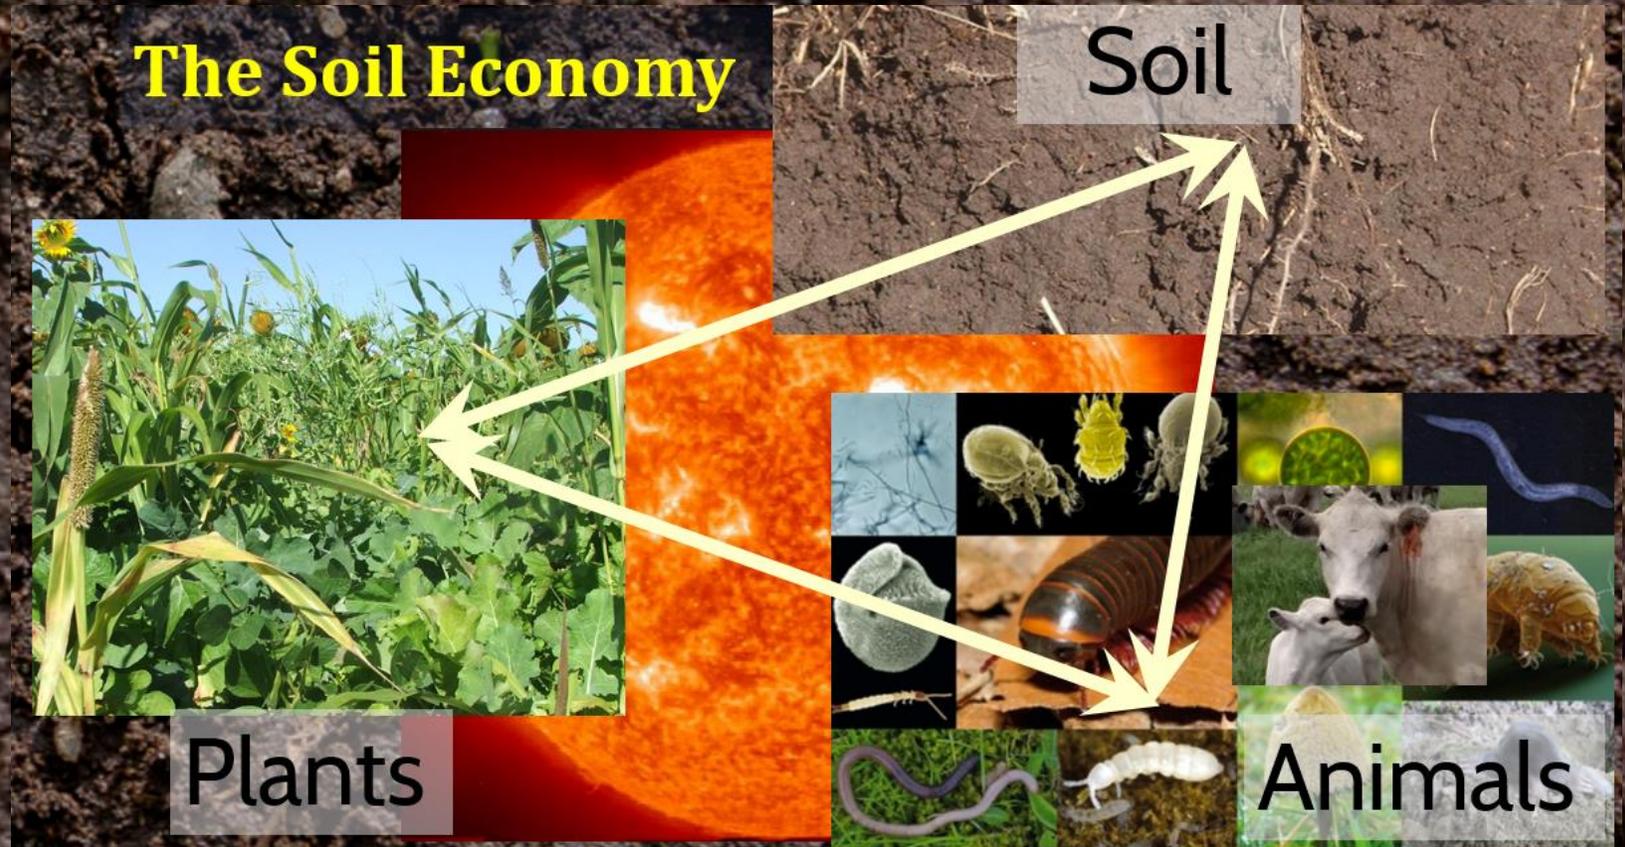

Keys To A Healthy SOIL!

- Supply (Producers/Sellers)
- Demand (Consumers/Buyers)
- Currency
- Capital
- Energy and Resources
- Infrastructure
- Defense and Protection

Eight Take-Away Points

1. Economies are intricately interconnected and interdependent

Eight Take-Away Points

2. Reduce the amount of welfare you are giving your economy - get everyone working!

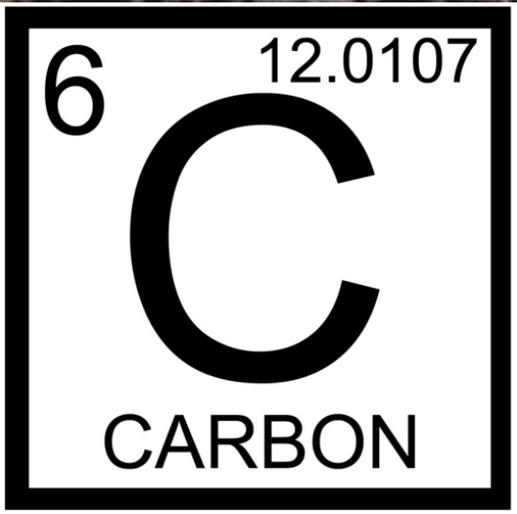

Eight Take-Away Points

2. Reduce the amount of welfare you are giving your economy - get everyone working!

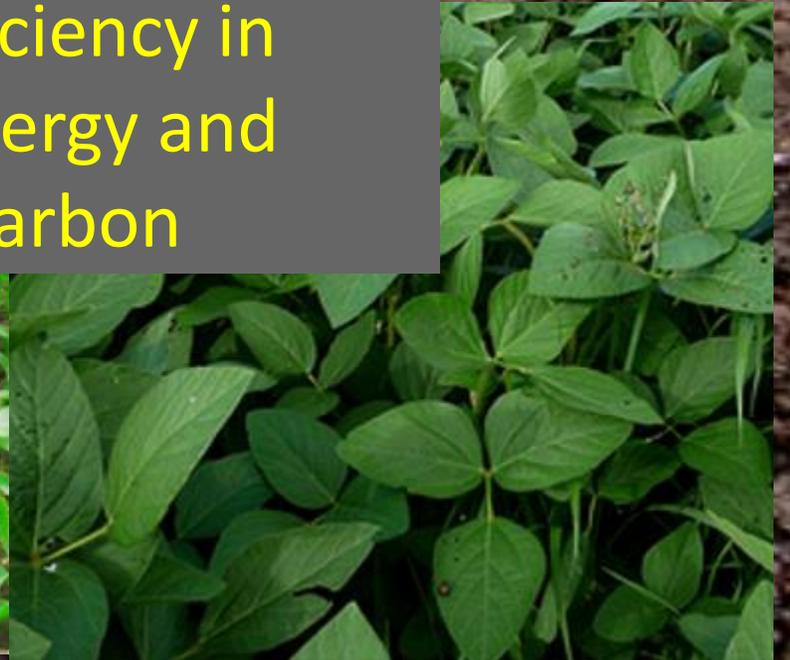

Eight Take-Away Points

3. Increase your “cash flow” of carbon currency

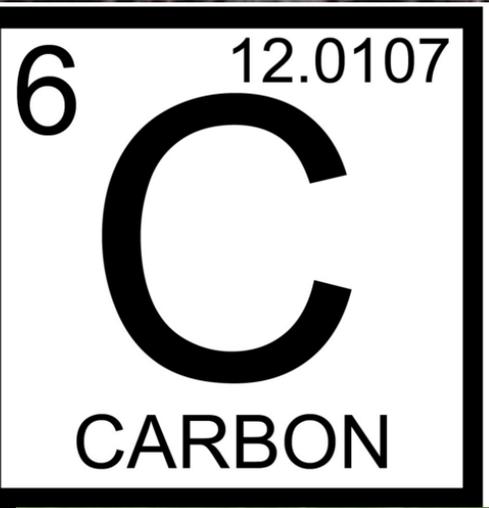

Less than 50% efficiency in collecting solar energy and producing liquid carbon

Eight Take-Away Points

3. Increase your “cash flow” of carbon currency

Less than 50% efficiency in collecting solar energy and producing liquid carbon

Eight Take-Away Points

4. Make capital investments of long term carbon (organic matter) and don't sell off investments

Eight Take-Away Points

4. Make capital investments of long term carbon (organic matter) and don't sell off investments

Keys To A Healthy **SOIL!**

Eight Take-Away Points

5. Take advantage of free tiny workers

- Manufacturing
- Mining
- Transportation
- Communication
- Protection

Eight Take-Away Points

6. Build and do not destroy infrastructure - you will really see your economy grow!

Eight Take-Away Points

6. Build and do not destroy infrastructure - you will really see your economy grow!

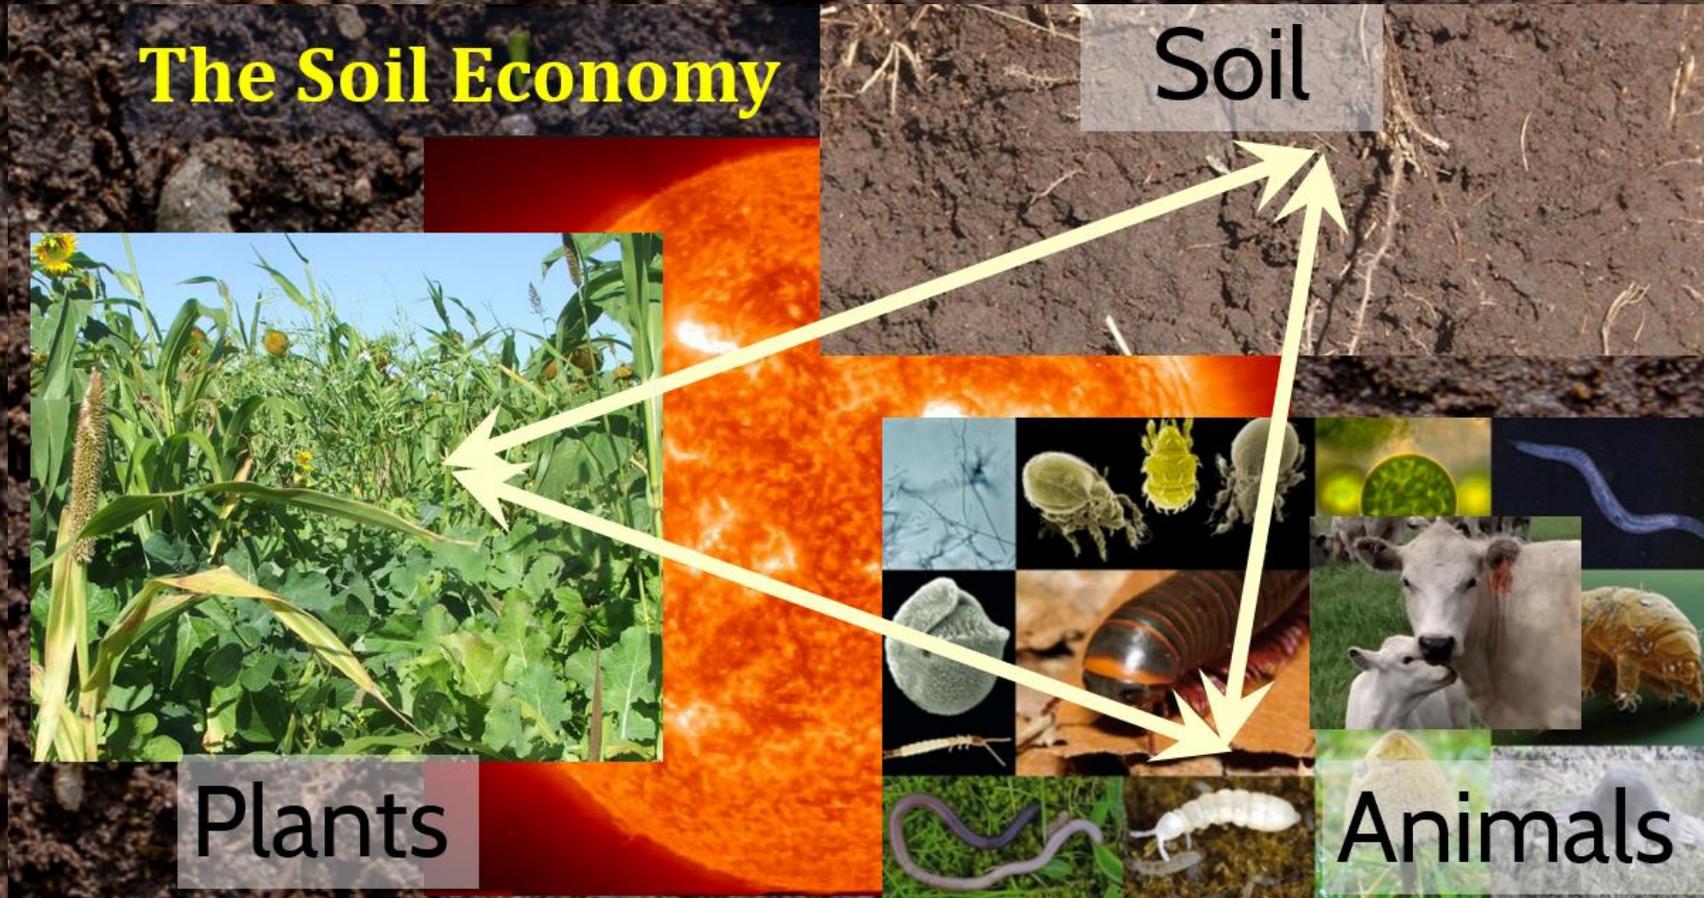

Eight Take-Away Points

7. Protect your economy with soil armor

Eight Take-Away Points

8. Diversity is so very important for a healthy economy - plants, roots, and soil animals
